## Introduction

### Short geographical characterization of Ukraine

Ukraine is the second-largest country in Europe — it is 1.1 times larger than France and 7.5 times less than the European part of Russia, and has an area of 603 700 km<sup>2</sup> (233 088 square miles).

Ukraine occupies large part of the East European Plain. The area of the country consists of vast lowlands, plains, or eminences with flattened or dismembered relief, and not crossed by natural boundaries except of the Carpathian Mountains on the Southwest and the Crimean Mountain Chain near the Black Sea in the South. The altitudes hesitate from zero (the Black Sea level) to 2 060 m (Hoverla Mountain top in the East Carpathians).

Northern part of Ukraine belongs to the forest zone, nemoral subzone, and named Polissya (marshy woodlands). The predominating formations are forests composed of *Pinus sylvestris*, *Alnus glutinosa*, *Betula pubescens*, *Quercus robur*, with small areas occupied by *Betula pendula*, *Carpinus betulus*, and *Fraxinus excelsior*-dominated communities. To the South Polissya is gradually replaced by forest-steppe with massifs of *Pinus sylvestris* and *Quercus robur* forests. The Carpathians are densely covered by *Abies alba*, *Picea abies*, *Fagus sylvatica*, and *Carpinus betulus* forests. Mountain forests of Crimea are dominated by *Fagus orientalis*, *F. sylvatica*, *Fraxinus excelsior*, *Carpinus betulus*, *C. orientalis*, *Pinus hamata*, *P. pallasiana*, *Quercus petraea*, and *Q. pubescens* communities. The steppe zone occupies southern and eastern parts of Ukraine. Besides open steppe communities on watershed areas, the river valleys are covered by woody vegetation. The southernmost areas of the steppe zone adjacent to the Black Sea and Sea of Azov are belonged to deserted steppes, or hemi-deserts.

Soil cover of Ukraine divides on several zones: sod-podzol and waterlogged soils under forests of Polissya, chernozem soils in forest steppes and steppes, and castaneous, partly salt soil in dry (deserted) steppes. Brown and gray forest soils develop under broadleaf vegetation in the Carpathians and the Crimean Mountains.

The climate of Ukraine is for the most part of temperate continental type. Narrow seaside of southern Crimea is belonged to the zone of subtropical climate. Winters vary from cool near the Black Sea to cold inland; summers are warm over the greater part of the country, and hot in the South. For example, northern part of Ukraine may be characterized by temperatures in Kyiv (Kiev), the capital city. Average temperatures range here from -6° C (21° F) in winter to 19° C (67° F) in summer. Precipitations are irregularly distributed: with the highest value in the West and the North, less towards the East and the Southeast. Annual precipitations constitute about 500 mm (19.7 inches) for the most part of Ukraine, reaching more than 1200 mm in the Carpathians. Droughts are usual event in southern areas.

## The concept of aphyllophoroid fungi accepted in this work

Volume of the group accepted by us in general corresponds to the former order Aphyllophorales Rea sensu Donk, 1964. The generalized term “aphyllophoroid fungi” is quite appropriate for naming of this artificial polyphyletic assemblage of taxa.

The taxa with typical clavarioid basidiomata, unsufficiently studied for Ukraine, and stipitate cantharelloid fungi (*Cantharellus*, *Craterellus*) were not included in the present checklist. Heterobasidiomycetous taxa resembling aphyllophoroid fungi and sometimes considered in the Aphyllophorales (the genera *Cerinomyces* and *Tulasnella*) were also omitted by us.

## History of the investigation of aphyllophoroid fungi in Ukraine

The first data on Ukrainian aphyllophoroid fungi were published in the book “Voyage dans la Russie meridional et la Crimée” (1842), supported by famous Russian Maecenas A. Demidov. The chapter of this book “Observation medicales et énumeration des plantes recueillies en Tauride” was written by J.H. Léveillé and included some mycological data. Léveillé reported 18 species of aphyllophoroid fungi which are known now under the names *Bjerkandera adusta*, *Daedalea quercina*, *Fomes fomentarius*, *Ganoderma lipsiense*, *G. lucidum*, *Hericium coralloides*, *Heterobasidion annosum*, *Inonotus dryadeus*, *Peniophora cinerea*, *Perenniporia medulla-panis*, *Phellinus ferruginosus*, *Phlebia radiata*, *Polyporus leptocephalus*, *Pyrofomes demidoffii* (described by him as *Polyporus demidoffii* on the base of Crimean material and named in honor of sponsor of the book), *Schizophyllum commune*, *Stereum hirsutum*, *Trametes versicolor*, and *Trechispora mollusca*.

First native Ukrainian researcher of the fungi was V.M. Czerniaiev, professor of Kharkiv University. He began his work in 1816, long time before publication of Léveillé’s article, but published his results only in 1845 under the title “Nouveaux Cryptogames de l’Ukraine et quelques mots sur la flore de ce pays”. Six species of aphyllophoroid fungi were recorded by him: *Lenzites gigantea*, *Daedalea quercina*, *Fistulina hepatica*, *Gloeophyllum protractum*, *Hydnellum melliodorum*, and *Trametes suaveolens*.

Since the middle of the 19<sup>th</sup> century some works on aphyllophoroid fungi of northern and western Ukraine were issued. The article on fungi of Ukrainian Left Bank Polissya including 16 species was published by J. Borsc̄ow (1869). Then in 1871 the work of Ya.Ya. Val’ts and L. Rishavi on mycobiota of Right Bank Polissya was issued. The mycological finds from environs of Lviv were reported by G. Krupa (1886, 1888).

Beginning of the 20<sup>th</sup> century is characterized by significant increasing of activity on investigation of West Ukrainian lands belonging to Austro-Hungary. In 1907 H. Bobiyak published the list of aphyllophoroid fungi from Roztochchya region. Some later B. Namysłowski and K. Rouppert examined collection of H. Bobiyak and extended the knowledge about the Aphyllophorales of this region (Namysłowski, Rouppert, 1909). In 1914 B. Namysłowski wrote an article about fungi of

Halicyya (Roztochchya) and Bukovyna (West Forest-Steppe) based on materials of his expeditions. In 1910–1920s A. Wróblewski studied the fungi in Precarpathian region and West Forest-Steppe (Wróblewski, 1916, 1922), F. Petruk in the Central Carpathians and Roztochchya (Petruk, 1925), Ya.M. Kuda in Volyn' (West Polissya; Kuda, 1926).<sup>1</sup>

In the same period aphyllophoroid fungi were studied in northern lands of Ukraine — Left and Right Bank Polissya, belonged to Russian Empire and later to the USSR. In 1915 A.L. Yavorskii published report on the Aphyllophorales of Kyiv City. In 1920s the same region was studied by Z.K. Hizhyts'ka (Hizhyts'ka, 1926, 1929a, 1929b).

A number of aphyllophoroid fungi were collected by S.S. Ganeshin in Poltava province (Left Bank Forest-Steppe). These collections were examined by V.I. Bondartseva-Monteverde and results were published in a large work (Bondartseva-Monteverde, 1921; Ganeshin, Bondartseva-Monteverde, 1922). Famous Russian mycologist A.S. Bondartsev carried out the investigations of aphyllophoroid fungi near Darnitsa in Kyiv outskirts (Left Bank Polissya; Bondartsev, 1926, 1927).

Two remarkable works on the Aphyllophorales were published in 1940: "Hymenomycetes of the main woody species of Crimean Reserve" by S.A. Gutsevich and "Hymenomycetes Carpatorum orientalium" by A. Pilát.<sup>2</sup> Despite of small volume, these works have brought a great contribution in the present knowledge on aphyllophoroid fungi of Ukraine. Work of Czech mycologist A. Pilát remains unsurpassed by the quantity of species found for the first time for Ukraine (almost 150) till now.

In the 2<sup>nd</sup> half of the 20<sup>th</sup> century the objects for attention of mycologists are different natural regions of Ukraine. Most of floristic works concerned the forest-steppe zone. Fungi of Left Bank Forest-Steppe in period from 1950s till now were studied by V.M. Solomakhina (1954), R.V. Ganzha (1960, 1970), A.S. Bukhalo (1961a, 1961b), M.F. Smitskaya and G.L. Rozhenko (1974), E.K. Karpenko (1980), A.S. Usichenko, A.Yu. Akulov, and D.V. Leontyev (Usichenko, Akulov, Leontyev, 2001; Usichenko, 2002). Data on aphyllophoroid fungi of Donetsk Forest-Steppe were obtained by I.M. Soldatova (1974) and V.P. Isikov (1993), of Right Bank Forest-Steppe — by I.O. Rayevs'ka and K.M. Komarets'ka (1949), M.M. Prudenko and V.M. Solomakhina (1971a, 1971b, 1997, 1998, 1999), and of Western Forest-Steppe — by P.Ye. Sosin (1940) and O.V. Isayeva (1952).

Left and Right Bank Polissya attracted no less attention of mycologists. Fungi of Right Bank Polissya (mostly in Kyiv City) were being investigated by M.Ya. Zerova (1948), E.A. Vinohrads'ka (1958), P.M. Koretskij and I.M. Soldatova (1978). Western Polissya were covered by studies of V.M. Solomakhina (1956a, 1956b, 1957, 1958a,

<sup>1</sup> Unfortunately, working on the checklist we had no possibility to become acquainted with publications of G. Krupa, B. Namysłowski, and A. Wróblewski, which are absent in libraries or kept in deep conservation, either are damaged in important places. Therefore data published by these authors were not included in the present list.

<sup>2</sup> Crimea and Transcarpathian region were out of administrative boundaries of Ukraine in this time.

1958b, 1959, 1960, 1961, 1965a, 1965b), V.P. Helyuta and V.P. Haiova (2001); Left Bank Polissya — by research of I.M. Soldatova (1984a, 1984b, 1985), A.S. Usichenko and A.Yu. Akulov (2001).

From 1950s a number of works were devoted to the fungi of Western regions of Ukraine, e.g. Transcarpathian region (Smitskaya, 1955, 1960, 1965, 1968; Lovas, 2000), the Carpathians and Precarpathian region (Gorovaya, 1979, 1908, 1982; Tribun, 1968, 1971a, 1971b, 1983, 1987a, 1987b), Roztochchya (Baziuk, 2000).

In the 1<sup>st</sup> half of the 20<sup>th</sup> century the aphyllophoroid fungi of Crimean Peninsula were studied by L.I. Vasil'eva-Pupysheva (1958), E.Z. Koval (1962), I.I. Maslov, I.S. Sarkina, T.V. Belich, and S.E. Sadogurskii (Maslov *et al.*, 1998; Sarkina, 2001), and V.P. Isikov (1977, 1981, 1988, 1994, 1997).

The steppe zone remained as “white spot” with respect to knowledge on biota of aphyllophoroid fungi until 1960s. Before this time only several species were recorded in this zone: A. Golubkov (1916) indicated the find of *Serpula lacrymans* in Kherson province (Left Bank Gramineous Steppe); G.G. Radzievsky (1952) reported the find of *Phellinus tuberculosus* in Right Bank Gramineous Steppe; *Schizophyllum commune*, *Polyporus rhizophilus*, and *P. squamosus* were found by M.Ya. Zerova in Right Bank Gramineous-Meadow Steppe and Right Bank Gramineous Steppe (Zerova, 1953, 1957). Later I.L. Dobrovols'kii and P.E. Sosin published for Right Bank Gramineous-Meadow Steppe 7 aphyllophoroid species (1960).

The species richness of the steppe zone of Ukraine were greatly elucidated after the series of works carried out in 1970s by I.M. Soldatova and S.P. Wasser. The first author focused his research mostly on steppes of the Left Bank part of Ukraine (Soldatova, 1971, 1972a, 1972b, 1973, 1974b, 1974c, 1974d, 1974e, 1975a, 1975b, 1976a, 1976c, 1977), the second — on Right Bank part lands (Wasser, 1971). Both authors have summarized their results in the monograph “Higher basidiomycetes of the steppe zone of Ukraine” (1977).<sup>3</sup> In 2000 additional data on aphyllophoroid fungi of the steppe zone (Left Bank Gramineous-Meadow Steppe) were published by M.P. Prydiuk.

A number of aphyllophoroid fungi are agents of woody plants diseases. So they are frequently considered in many publications of phytopathological subjects.<sup>4</sup> The main works on pathology of forest and garden plants concerning aphyllophoroid fungi are: Beilin (1951), Bratus and co-authors (1949, 1964, 1969), Chuprina (1970), Kharkevich (1952, 1959), Klyushnyk (1955, 1958), Kostyuk (1949), Krivoshei (1958), Lavitskaya (1958), Morochkovs'ka (1965, 1966), Pavlenko (1963), Shevchenko (1972), Stasevich (1999).

Some species of aphyllophoroid fungi are active destroyers of timber. “House fungi” and fungi on practical wood were described in works of S.M. Moskovets’

<sup>3</sup> Also the remarkable review work “Distribution of the Aphyllorales order fungi in the Ukraine” has come from pen of I.M. Soldatova (1981).

<sup>4</sup> Usually in phytopathological works only the most widespread and harmful pathogens are considered. Working on the checklist we did not make an effort to embrace all spectrum of Ukrainian literature on forest pathology, restricting our attention to the publications where the geographical localities of species is more or less exactly indicated.

(1932), Z. Hizhyts'ka and M. Berehova (1934), and A.A. Demikhovs'ka (1959).

Data on Ukrainian aphyllophoroid fungi were partly published in monographs devoted to their various groups in the former USSR, e.g. by A.S. Bondartsev "The Polyporaceae of the European USSR and the Caucasia" (1953), T.L. Nikolajeva "Familia Hydnaceae" (1961), T.A. Davydkina "The Stereaceae of the Soviet Union" (1980), U. Köljalg "Tomentella (Basidiomycota) and related genera in temperate Eurasia" (1996).

Until now, the most complete summary on aphyllophoroid fungi of Ukraine was the handbook by M.Ya. Zerova, G.G. Radzievsky, and S.V. Shevchenko "Identification guide to fungi of Ukraine, vol. 5, part 1" (1972). In further years a series of works devoted to mycobiota of selected areas were published, e.g. "Biodiversity of Carpathian Biosphere Reserve" (Dudka *et al.*, 1997), "Annotated checklist of Crimean macromycetes" (Sarkina, 2001). These works have sufficiently supplemented the data on fungal diversity on these areas.

In 1996 the generalized digest "Fungi of Ukraine. A preliminary checklist" was issued by the mycologists of M.G. Kholodny Institute of Botany with assistance of CAB International Bioscience (Minter, Dudka, 1996). The data on aphyllophoroid fungi as geography, substrata, dates of earliest records, included in this work, were based on the M.G. Kholodny Institute of Botany Herbarium (KW). The important information from this book is reference (inventory) numbers helping to trace the aphyllophoroid specimens in KW herbarium. This herbarium is the largest fungal collection in Ukraine. The collections of M.Ya. Zerova, G.G. Radzievsky, S.P. Wasser, T.P. Tribun, I.M. Soldatova, M.F. Smitskaya, S.F. Morochkovs'kyi and others are deposited there. The preliminary checklist of the fungi of Ukraine had the large guiding significance for our work.

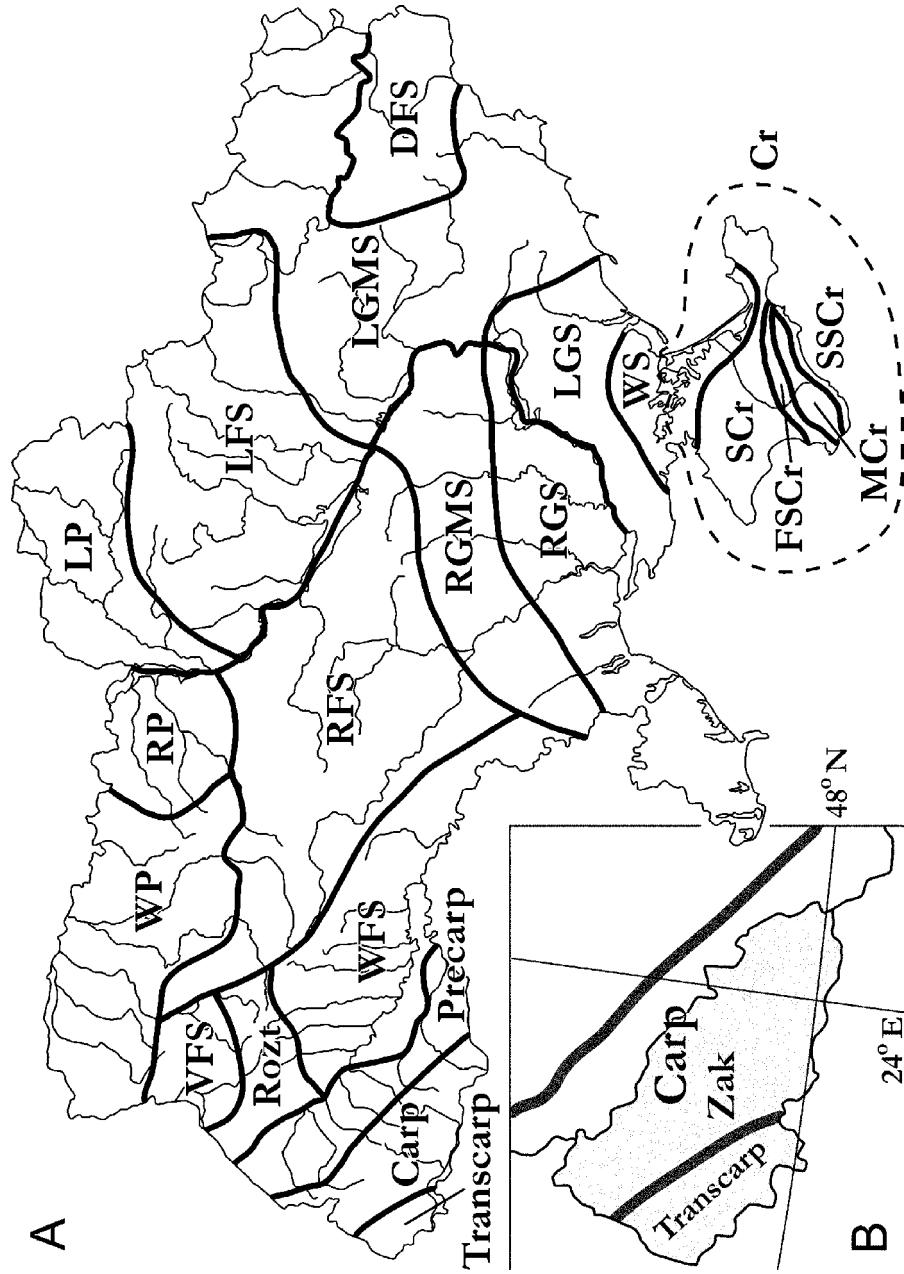

## Format of the list

Each species entry (and also entries of intraspecific units) consists of the next consequence of data separated by signs "/" or "—": **Latin name** of the taxon — *Synonym(s)* under which the taxon was published for Ukraine or marked in herbarium<sup>5</sup> / Reference herbarium number(s), if available / Name(s) of author(s) and year of the earliest publication of the taxon for Ukraine / distribution in natural regions of Ukraine (see below); the regions are arranged in the order from the West to the East and from the North to the South (with numbered literature references in brackets).<sup>6</sup>

Identifications of species were carried out using modern taxonomic literature (e.g. Eriksson, Ryvarden, 1973, 1975, 1976; Eriksson *et al.*, 1978, 1981, 1984; Davydkina, 1980; Jülich, Stalpers, 1980; Bondartseva, Parmasto, 1986; Hjortstam *et al.*, 1987, 1988; Köljalg, 1996; Bondartseva, 1998; Nuñez, Ryvarden, 2000, 2001).

<sup>5</sup> The varietas and forms of a species which are perhaps not exceed the bounds of uninheritable variability are typed in italics in the main species paragraph together with synonyms.

<sup>6</sup> The numbers of sources from which the geographical position of species locality was unclear in respect to natural regions, are printed in italics, e.g. separately — (33), or in a string with other sources — (1, 33, 55).

The taxa are arranged following the system accepted in the 9<sup>th</sup> edition of Ainsworth and Bisby's dictionary of the fungi (Kirk *et al.*, 2001). Spelling of full and abbreviated forms of authors names of fungal taxa are following Kirk and Ansell (1992). The author's names which are absent in Kirk and Ansell's work and thus could not be verified by us, are given in inverted commas (' ') in the form published in studied literature sources. The degree of floristic newness of finds we determined by analysis of original publications. Unfortunately many of species in the checklist are still known for us only from literature because of the appropriate collections are lost or inaccessible, and so the single way was to rely upon the qualification of the author of a find. The species published for Ukraine for the first time are marked in the checklist with asterisk “\*”.

The species were distributed in natural regions of Ukraine following botanic-geographical (geobotanical) division of the territory (Fig. 1 A; Zerova *et al.*, 1972: 223). For naming of the regions (districts) in the text the next abbreviations are used:

- WP** —Western Polissya;
- RP** —Right Bank Polissya;
- LP** —Left Bank Polissya;
- VFS** —Volynska Forest-Steppe (Volyn' Forest-Steppe);
- Rozt** —Forests of Roztochchya and Opil'e;
- Transcarp** —Transcarpathian region (Transcarpathians, Transcarpathia, Zakarpattyia);
- Carp** —Carpathians;
- Precarp** —Precarpathian region (Precarpathians, Prykarpattyia);
- WFS** —Western Forest-Steppe;
- RFS** —Right Bank Forest-Steppe;
- LFS** —Left Bank Forest-Steppe;
- RGMS** —Right Bank Gramineous-Meadow Steppe;
- LGMS** —Left Bank Gramineous-Meadow Steppe;
- DFS** —Donetsk (Donets'k) Forest-Steppe;
- RGS** —Right Bank Gramineous Steppe;
- LGS** —Left Bank Gramineous Steppe;
- WS** —Wormwood Steppe;
- SCr** —Steppe Crimea;
- FSCr** —Forest-Steppe Crimea;
- MCr** —Mountain Crimea;
- SSCr** —South Seaside of Crimea.

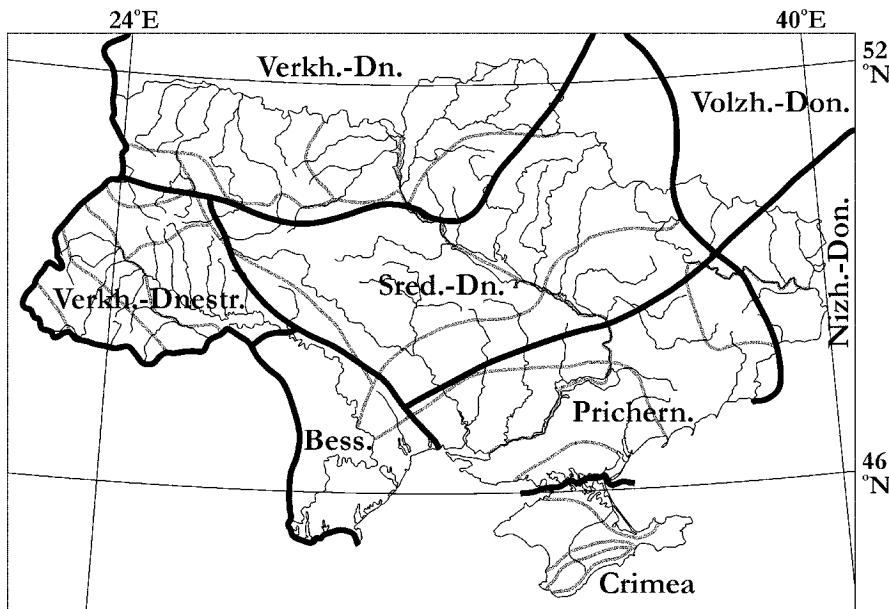

In some cases other names for regions were used, depending on the exactness of literature data — Crimean Peninsula (“Cr”), “Podol'e”, “Western Ukraine”, “Ukraine”.

In Nikolajeva (1961) and Davydkina (1980) the distribution of species is given in

---

← **Fig. 1.** Geobotanical division of Ukraine (A; means of abbreviations are as indicated above) and comparison of the boundaries of Zakarpats'ka oblast (Zak) and Carpathian and Transcarpathian regions (B).

frameworks of floristic division of the USSR. From these sources we taken the data belonged to Verkhnednestrovskii, Srednedneprovskii, Prichernomorskii, and Crimean floristic districts, which are for the most part overlap with Ukraine. The correlation of Ukraine and districts of the "Flora of the USSR" is shown on Fig. 2.

**Fig. 2.** Comparison of geobotanical division of Ukraine with floristic districts according to "Flora of the USSR". Floristic districts: **Verkh.-Dn.** — Verkhnedneprovskii (Upper Dnieper), **Verkh.-Dnestr.** — Verkhne-Dnestrovskii (Upper Dnestr), **Sred.-Dn.** — Sredne-Dneprovskii (Middle Dnieper), **Volzh.-Don.** — Volzhsko-Donskoi, **Bess.** — Bessarabskii, **Prichern.** — Prichernomorskii (Near Black Sea District), **Nizh.-Don.** — Nizhne-Donskoi (Low Don), **Crimea** — Crimean District.

### Taxonomic structure of the biota of aphylllophoroid fungi of Ukraine

Based on data of literature and examined herbarium specimens, biota of aphylllophoroid fungi of Ukraine is represented by 461 species, 171 genera,<sup>7</sup> 36 families, and 7 orders of the class Hymenomycetes, phylum Basidiomycota (Tab. 1).

Polyporaceae and Hymenochaetaceae are the most species-rich and common for Ukraine. Such character of distribution is explained by the variety of life forms and modes of nutrition (obligate saprobes, facultative parasites, etc.). The second place

<sup>7</sup> Including 162 valid genera and 9 additional genera from the group of dubious species and names of unclear application.

**Tab. 1.** — Taxonomic structure of the biota of aphyllophoroid fungi of Ukraine

Order	Familia	Number of species	% of biota
Agaricales	Fistulinaceae	1	0.2
	Marasmiaceae	2	0.4
	Schizophyllaceae	6	1.3
Boletales	Coniophoraceae	11	2.4
Cantharellales	Botryobasidiaceae	6	1.3
	Hydnaceae	1	0.2

	Thelephoraceae	28	6.1
Doubtful species		5	1.1
Taxa with unknown correct name, dubious and confused names		30	6.5
In all		461	100

with respect to species richness is occupied by the next families: Thelephoraceae, Schizophoraceae and Meruliaceae, Fomitopsidaceae, Hapalopilaceae and Stereaceae, Meripilaceae. Each of these families constitutes approximately 4–6% of biota. The third group are the families constituting about 2–4% of biota: Steccherinaceae, Pe-

niophoraceae, Phanerochaetaceae, Atheliaceae, Coniophoraceae, Hyphodermataceae and Bankeraceae.

The families Lachnoladriaceae, Hericiaceae and Sistotremataceae, Schizophyllaceae and Botryobasidiaceae, Cyphellaceae and Gloeophyllaceae constitute each about 1–2% of biota. This picture is quite naturally for Ukraine because the number of species in these families in global scale is relatively small, e.g. only 21 species in Botryobasidiaceae. The same principle remains for the families representing less than 1% of biota.

### **Distribution of aphyllophoroid fungi in different areas of Ukraine**

The species diversity is rather unevenly studies for different natural areas of Ukraine, and varies from 1 to 314 per a region (Tab. 2). At the same time the differences in species richness is determined by variety of environmental conditions and

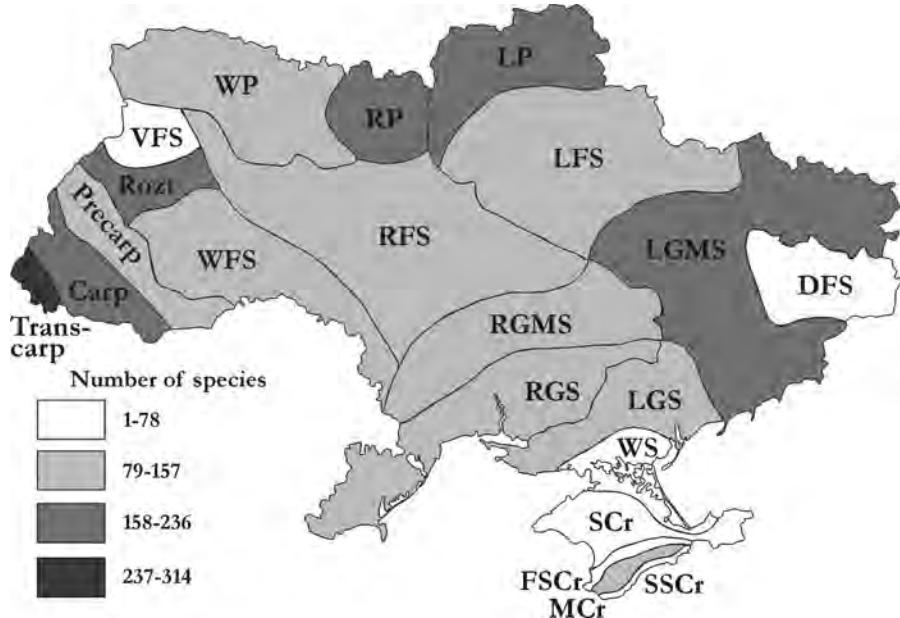

**Tab. 2. — Number of species of aphyllophoroid fungi recorded in geobotanical regions (botanic-geographical districts) of Ukraine**

Region	Number of species	% of biota
Western Polissya	79	17.1
Right Bank Polissya	168	36.4
Left Bank Polissya	207	44.9
Volyn' Forest- Steppe	12	2.6
Roztochchya	188	40.8
Transcarpathian region + SW macro-slope of the Carpathians*	314	68.1
Carpathians	223	48.4
Precarpathian region	90	19.5

Mountain Crimea	147	31.9
South Seaside of Crimea	36	7.8
Total Crimea**	181	39.3

Remarks: \*Evidently "Transcarpatian region" in sense of a number of authors includes the part of Carpathians lying to the southwest of the main watershed line (SW macro-slope), i.e. in the boundaries of Zakarpats'ka oblast (Fig. 1 B). \*\*Including data without mention in which of natural areas of Crimea the species were found.

types of predominating ecosystems in each region (marshy woodlands, mountain forests, steppe forest islands, steppes, etc.). The natural regions of Ukraine were ranged in four groups by the number of recorded aphylllophoroid species (Fig. 3).

The most species-rich region is the Carpathian Mountains (including Transcarpathian region — see remark to Tab. 2), that is naturally due to high value of precipitations, high per cent of old growing forests and high portion of forested area.

**Fig. 3.** Species diversity / the degree of floristic study of aphylllophoroid fungi in geobotanical regions of Ukraine.

## List of species

ORDO AGARICALES CLEM.

Fam. **Fistulinaceae** Lotsy

1. **Fistulina hepatica** (Schaeff. : Fr.) Fr. / CWU (Myc) Kh-238 / Borszów, 1869 / WP (71, 111, 139, 174), RP (44), LP (5, 11, 31, 160, 170), Rozt (1, 4, 174), Transcarp (1, 74, 96, 174), Precarp (1, 174), WFS (48, 68, 148, 174), RFS (147, 174), LFS (10, 15, 16, 31, 159, 161), RGMS (116, 118, 120, 123, 128), LGMS (113, 116, 118, 120, 123, 128, 167), DFS (52, 117), RGS (116, 118, 119, 120, 123, 128), LGS (116, 118, 119, 120, 123, 128), MCr (7, 40, 105, 174), SSCr (105), Ukraine (19).

Fam. **Marasmiaceae** Roze ex Kühner

2. **Chaetocalathus galeatus** (Berk. et M.A. Curtis) Singer — *Phaeocyphella galeata* (Schumach.) Bourdot et Galzin / Pilát, 1940 / Transcarp (96).

3. **Merismodes anomalus** (Pers. : Fr.) Singer — *Solenia anomala* Pers.; *S. confusa* Bres. / Bobiyak, 1907 / RP (44), Rozt (4), Transcarp (96), Carp (94).

Fam. **Schizophyllaceae** Roze ex Quél.

4. **Cytidiella albomellea** (Bondartsev) Parmasto — *Cytidia albomellea* Bondartsev / Zerova et al., 1972 / LFS (174).

5. **Henningsomyces candidus** (Pers. ex Schleich.) Kuntze — *H. stipatus* (Pers.) Kuntze; *H. stipitatus* (Fuckel) Kuntze; *Solenia candida* Pers.; *S. stipata* Fr.; *S. stipitata* Fr. / Pilát, 1940 / Rozt (174), Transcarp (1, 96), Precarp (174), DFS (174).

6. **Porotheleum fimbriatum** Pers. : Fr. — *Stromatoscypha fimbriata* (Pers. : Fr.) Donk / Pilát, 1940 / WP (174), RP (174), LP (7), Rozt (1, 174), Transcarp (1, 96), Carp (1, 174), WFS (7, 174), RFS (174), LFS (174), MCr (7, 9, 174).

7. **Rectipilus fasciculatus** (Pers.) Agerer — *Solenia fasciculata* Pers. / Bobiyak, 1907 / Rozt (1, 4).

8. **Schizophyllum amplum** (Lév.) Nakasone — *Auriculariopsis ampla* (Lév.) Maire; *Cytidia flocculenta* (Fr. : Fr.) Höhn. et Litsch.; *C. lanata* W.B. Cooke / Bondartsev, 1927 / RP (174), LP (6, 174), Transcarp (1, 96), RGMS (118, 125), LGMS (101, 118, 125, 167, 174), DFS (125, 174), RGS (118), LGS (118).

9. **Schizophyllum commune** (L. : Fr.) Fr. — *Sch. alneum* J. Schröt. / CWU (Myc) Kh-232; KW 17873, 17875, 17878, 17880, 17886, 17887, 17890, 17892, 17893, 17897, 17931, 17933, 17935, 17937, 28543-28565, 28860, 28861, 28865, 40506, 45216-45218 / Léveillé, 1842 / WP (140, 142), RP (65, 77, 85, 164, 171, 172), LP (5, 11, 32, 131, 160, 170), Rozt (4), Transcarp (1, 74), Carp (1, 36, 38, 94, 106), WFS (68), RFS (98, 147), LFS (16, 56, 57, 79, 159, 161), DFS (57, 58), RGMS (172), LGMS (101), RGS (66, 172), SCr (49, 50, 105), FSCr (105), MCr (40, 73, 105), SSCr (51), Ukraine (21).

ORDO BOLETALES E.M. GILBERT

Fam. **Coniophoraceae** Ulbr.

10. **Coniophora arida** (Fr.) P. Karst. — *C. laxa* Fr.; *C. puteana* f. *laxa* Fr. / CWU (Myc) Kh-33 / Bondartsev, 1927 / LP (6, 174), Transcarp (96), LFS (159, 161), LGMS (101).

11. **Coniophora marmorata** Desm. / Bondartseva, Parmasto, 1986 / Transcarp (9).

12. **Coniophora olivacea** (Pers. : Fr.) P. Karst. — *Coniophorella olivacea* (Pers. : Fr.) P. Karst. / Bondartsev, 1927 / LP (6, 174), Transcarp (1, 96), Carp (1, 174), RGMS (23).

13. **Coniophora puteana** (Schumach. : Fr.) P. Karst. — *C. cerebella* (Pers.) J. Schröt.; *Corticium puteanum* (Schumach. : Fr.) Sacc.; *Thelephora puteana* Schumach. : Fr. / CWU (Myc) Kh-53 / Bobiyak, 1907 / WP (174), RP (21, 85, 174), LP (6, 11, 21, 131, 160, 174), Rozt (1, 4), Transcarp (1, 96), Carp (1, 174), Precarp (21), WFS (21), RFS (147), LFS (21, 159, 161), LGMS (100, 101, 167).

14. **Jaapia ochroleuca** (Bres.) Nannf. et J. Erikss. / Bondartseva, Parmasto, 1986 / Transcarp (9).

15. **Leucogyrophana mollusca** (Fr. : Fr.) Pouzar — *Merulius molluscus* Fr. : Fr. / Hizhyts'ka, 1929 / RP (44, 85, 174), Precarp (1, 174).

16. **Leucogyrophana pinastri** (Fr. : Fr.) Ginns et Weresub — *Merulius pinastri* (Fr. : Fr.) Burt / Demikhovs'ka, 1959 / Ukraine (21).

17. **Leucogyrophana pulverulenta** (Sowerby : Fr.) Ginns — *Merulius minor* Falck in Möller / Demikhovs'ka, 1959 / Ukraine (21).

18. **Pseudomerulius aureus** (Fr. : Fr.) Jülich — *Merulius aureus* Fr. : Fr. / CWU (Myc) S-41 / Hizhyts'ka, 1929 / RP (44, 174), LP (160), Transcarp (1, 96), Carp (1, 174).

19. **Serpula himantoides** (Fr. : Fr.) P. Karst. / KW 18027 / Soldatova, 1985 / LP (132).

20. **Serpula lacrymans** (Wulffen in Jacq. : Fr.) J. Schröt. — *Merulius lacrymans* (Wulffen. : Fr.) Schumach.; *Gyrophana lacrymans* (Wulffen : Fr.) Pat. / CWU (Myc) Kh-37 / Borsčów, 1869 / WP (21, 174), RP (21, 42, 174), LP (11, 21, 170), Rozt (1, 4, 174), Transcarp (1, 96), Carp (174), Precarp (21, 174), WFS (21), RFS (21, 174), LFS (21, 159, 161), RGMS (118, 121), LGMS (121, 118, 167), DFS (174), LGS (34, 118, 121), RGS (121, 118, 174), Cr (105, 174).

#### ORDO CANTHARELLALES GÄUM.

##### Fam. **Botryobasidiaceae** (Parmasto) Jülich

21. **Botryobasidium conspersum** J. Erikss. / Prydiuk, 2000 / LGMS (101).

22. **Botryobasidium laeve** (J. Erikss.) Parmasto / Isikov, 1988 / SSCr (51).

23. **Botryobasidium pruinatum** (Bres.) J. Erikss. — *Corticium coronatum* (J. Schröt.) Sacc. / Pilát, 1940 / Transcarp (1, 96).

24. **Botryobasidium subcoronatum** (Höhn. et Litsch.) Donk — *Corticium subcoronatum* Höhn. et Litsch. / Bondartsev, 1927 / LP (6, 174), Transcarp (1, 96), Carp (1, 174), RGMS (125), LGMS (167).

25. **Botryobasidium vagum** (Berk. et M.A. Curtis) D.P. Rogers — *Corticium botryosum* Bres.; *C. vagum* Berk. et M.A. Curtis / Hizhyts'ka, 1929 / RP (44, 174), Transcarp (1, 96), Carp (1, 174), LGMS (101, 174), SCr (49, 50).

26. **Botryohypochnus isabellinus** (Fr. : Fr.) J. Erikss. — *Hypchnus isabellinus* Fr. : Fr.; *Tomentella isabellina* (Fr. : Fr.) Höhn. et Litsch. / KW 17941 / Bobiyak, 1907 / LP (6, 174), Rozt (1, 4, 174), Transcarp (1, 96), Carp (1, 174), LGMS (167).

Fam. **Hydnaceae** Chevall.

27. **Hydnum repandum** L. : Fr. [incl. *H. rufescens* Fr.]<sup>1</sup> / KW 18675, 45292–45294 / Borsčów, 1869 / WP (135, 143, 174), RP (44, 174), LP (11, 131, 170, 174), Rozt (174), Transcarp (96, 108), Carp (174), Precarp (174), WFS (88, 148, 174), RFS (88, 147), LFS (88, 174), RGMS (122), LGMS (122, 167), RGS (122), LGS (122), MCr (105), SScr (105).

f. **albidum** Peck / Solomakhina, 1998 / RFS (147).

ORDO HYMENOPHYLLOPHYLLOTALES OBERW.

Fam. **Hymenochaetaceae** Donk

28. **Coltricia cinnamomea** (Jacq. ex Pers.) Murrill — *Polyporus cinnamomeus* Jacq. ex Pers. / Bobiyak, 1907 / Rozt (1, 4, 174), Transcarp (1, 7, 9, 108), Precarp (1, 174), RGMS (122), LGMS (122, 167), RGS (122), LGS (122).

29. **Coltricia focicola** (Berk. et M.A. Curtis) Murrill — *C. perennis* var. *focicola* (Berk. et M.A. Curtis) Pilát; *Polystictus perennis* f. *focicola* 'B. et Svid.' / Pilát, 1940 / Transcarp (1, 7, 96), LGS (118, 122).

30. **Coltricia perennis** (L. : Fr.) Murrill — *Polyporus pictus* Schultz; *Polystictus perennis* (L. : Fr.) P. Karst. / CWU (Myc) Kh-263; KW 40891 / Borsčów, 1869 / WP (140, 174), RP (42, 162, 174), LP (11, 131, 160, 170, 174), VFS (174), Rozt (4), Transcarp (1, 96), Precarp (1, 174), RFS (145, 147), LFS (159, 161), RGMS (118, 122), LGMS (101, 118, 122, 167), RGS (118, 122).

31. **Fomitiporia hartigii** (Allesch. et Schnabl) Fiasson et Niemelä — *Phellinus hartigii* (Allesch. et Schnabl) Bondartsev / Bondartsev, 1953 / Transcarp (1, 7, 9, 107, 108, 109, 154), Carp (1, 174, 154, 157), Precarp (1, 174), RGMS (128), LGMS (114, 128, 167), RGS (128), LGS (128).

32. **Fomitiporia punctata** (P. Karst.) Murrill — *Phellinus friesianus* (Bres.) Bourdot et Galzin; *Phellinus punctatus* (P. Karst.) Pilát / KW 18401, 18405, 18937–18950 / Pilát, 1940 / WP (174), VFS (174), Rozt (1, 174), Transcarp (1, 74, 96), Carp (1, 24), Precarp (1, 174), LGMS (167), RGS (119), LGS (119), MCr (105), SScr (51, 54, 105, 174).

33. **Fomitiporia robusta** (P. Karst.) Fiasson et Niemelä — *Fomes robustus* P. Karst.; *Phellinus robustus* (P. Karst.) Bourdot et Galzin; *Ph. robustus* f. *aceris* Bondartsev; *Ph. robustus* f. *sterilis* Pilát / CWU (Myc) Kh-243; KW 18953, 18954, 18957, 18972, 18974, 18975, 18963, 18968, 18992, 18999 / Gutsevich, 1940; Pilát, 1940 / WP (137, 138, 139, 143, 174), RP (174), LP (7, 174, 160), Rozt (1, 174), Transcarp (1, 96, 174), Carp (155), Precarp (1, 174), WFS (7, 174), RFS (145, 147), LFS (15, 16, 159, 161),

---

<sup>1</sup> The wide species concept of *Hydnum repandum* accepted in this work entirely takes up the species concept of *H. rufescens*.

108. **Amylocorticium subsulphureum** (P. Karst.) Pouzar — *Peniophora subsulphurea* (P. Karst.) Höhn. et Litsch. / Pilát, 1940 / Transcarp (1, 96).

109. **Athelia arachnoidea** (Berk.) Jülich — *Corticium centrifugum* Lév. ss. Bres. / Pilát, 1940 / Transcarp (1, 96, 174), Carp (1, 174).

110. **Athelia fibulata** M.P. Christ. / CWU (Myc) Kh-32 / Usichenko, 2002 / LFS (159).

111. **Athelia teutoburgensis** (Brinkmann) Jülich — *Corticium flavescens* Bres., 1905 non (Bonord.) G. Winter, 1884; *C. teutoburgense* Brinkmann / Bondartsev, 1927 / LP (6, 174), Transcarp (1, 96).

112. **Byssocorticium atrovirens** (Fr. : Fr.) Bondartsev et Singer — *Corticium atrovirens* (Fr. : Fr.) Fr. / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174).

113. **Cristinia helvetica** (Pers. : Fr.) Parmasto — *Grandinia helvetica* Pers. : Fr. / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174), WFS (88).

114. **Irpicodon pendulus** (Alb. et Schwein. : Fr.) Pouzar — *Irpex pendulus* (Alb. et Schwein.) Fr.; *Radulum pendulinum* Nikol. / Yavorskii, 1915 / WP (174), RP (174), LP (170, 174), VFS (174), Rozt (1, 174).

115. **Leptosporomyces galzinii** (Bourdot) Jülich / CWU (Myc) Kh-21 / Usichenko, 2002 / LFS (159).

116. **Piloderma byssinum** (P. Karst.) Jülich — *Corticium byssinum* (P. Karst.) Massee / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174).

117. **Plicaturopsis crispa** (Pers. : Fr.) D.A. Reid — *Plicatura faginea* (Schrad.) P. Karst.; *Troglia crispa* (Pers. : Fr.) Fr. / Bobiyak, 1907 / Rozt (1, 4), Transcarp (1, 96).

Fam. **Boreostereaceae** Jülich

118. **Veluticeps abietina** (Pers. : Fr.) Hjortstam et Tellería — *Stereum abietinum* (Pers. : Fr.) Fr. / Pilát, 1940 / RP (174), LP (174), Rozt (174), Transcarp (1, 96), Carp (1, 37, 38, 174), WFS (20).

119. **Veluticeps ambigua** (Peck) Hjortstam et Tellería — *Stereum carpaticum* Pilát / Pilát, 1940 / Transcarp (1, 96), WFS (20).

#### Fam. Corticiaceae Herter

120. **Corticium roseum** Pers. — *Aleurodiscus roseus* (Pers. : Fr.) Höhn. et Litsch.; *Hypochnus roseus* (Pers. : Fr.) J. Schröt.; *Laeticorticium roseum* (Pers. : Fr.) Donk / CWU (Myc) Kh-174 / Bobiyak, 1907 / RP (85, 174), LP (6, 170, 174), Rozt (1, 4, 174), Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), LFS (159), LGMS (167).

121. **Cytidia salicina** (Fr. : Fr.) Burt — *Corticium salicinum* (Fr. : Fr.) Fr. / Bobiyak, 1907 / Rozt (1, 4), Precarp (1, 174), RGMS (121, 174), LGMS (121, 125, 167), RGS (121, 125), LGS (121).

122. **Dendrothele acerina** (Pers. : Fr.) P.A. Lemke — *Aleurodiscus acerinus* (Pers. : Fr.) Höhn. et Litsch. / Pilát, 1940 / Transcarp (1, 96), LGMS (125, 167), DFS (125), LGS (125).

123. **Vuilleminia comedens** (Nees : Fr.) Maire — *Corticium comedens* (Nees : Fr.) Fr. / CWU (Myc) Kh-50; KW 1587, 17899, 17902, 17903, 17905-17910, 17912-17916 / Bobiyak, 1907 / RP (44, 174), LP (5, 6), Rozt (1, 4, 150), Transcarp (1, 74, 96, 107), Carp (1, 174), Precarp (1, 174), WFS (174, 68), RFS (147), LFS (159, 174), RGMS (116, 118, 133), LGMS (101, 113, 116, 118, 133, 167, 174), DFS (52, 83, 117, 174), LGS (82, 116, 118, 119, 133, 174), RGS (116, 118, 119, 133, 174), FSCr (49, 50), MCr (174).

#### Fam. Cyphellaceae Lotsy

124. **Flavophlebia sulfureoisabellina** (Litsch.) K.H. Larsen. et Hjortstam — *Corticium sulfureoisabellinum* Litsch. / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174).

125. **Radulomyces confluens** (Fr. : Fr.) M.P. Christ. — *Corticium confluens* (Fr. : Fr.) Fr.; *C. tephroleucum* Bres. / CWU (Myc) Kh-6, 43, S-34; KW 18078, 18081 / Bondartsev, 1927 / RP (174), LP (6, 160, 174), Precarp (1, 174), LFS (159), LGMS (101, 167, 174).

126. **Radulomyces molaris** (Chaillet ex Fr. : Fr.) Christ. — *Radulum molare* Chaillet ex Fr. : Fr.; *R. rude* (Pers.) S. Lundell / CWU (Myc) Cr-8, Kh-27, 42, 183, 184, S-33, S(H)-6 / Bobiyak, 1907 / WP (174), RP (174), LP (160, 174), VFS (174), Rozt (1, 4, 174), WFS (174), RFS (88, 147, 174), LFS (88, 159, 174), LGMS (101, 167, 174), MCr (174).

127. **Sarcodontia crocea** (Schwein. : Fr.) Kotl. — *Hydnnum schiedermayeri* Heufl. / CWU (Myc) Kh-142 / Bobiyak, 1907 / RP (174), LP (171, 160, 174), Rozt (1, 4, 174), WFS (174), RFS (88, 174), LFS (88, 159, 174), RGMS (116), LGMS (116, 167), DFS (117), RGS (116, 119, 126), LGS (116, 119), FSCr (174), MCr (40), Cr (88).

128. **Woldmaria filicina** (Peck) Knudsen — *Cyphella filicina* P. Karst.; *Solenia crocea* Fr.; *W. crocea* (P. Karst.) Cooke / Pilát, 1940 / Transcarp (96).

#### Fam. Cystosterteaceae Jülich

129. **Crustomyces subabruptus** (Bourdot et Galzin) Jülich — *Odontia subabrupta* Bourdot et Galzin / Pilát, 1940 / Transcarp (96), Carp (174), Precarp (174), WFS (88), Cr (53, 88, 174).

130. **Cystostereum murrayi** (Berk. et M.A. Curtis) Pouzar — *Stereum murrayi* (Berk. et M.A. Curtis) Burt. / Pilát, 1940 / Transcarp (1, 96), WFS (20, 88), LGMS (167), Cr (88).

Fam. **Fomitopsidaceae** Jülich

131. **Amylocystis lapponica** (Romell) Bondartsev et Singer ex Singer — *Lepotorus lapponicus* (Romell) Pilát / Pilát, 1940 / Transcarp (1, 7, 96).

132. **Anomoporia bombycinia** (Fr. : Fr.) Pouzar — *Fibuloporia bombycinia* (Fr. : Fr.) Bondartsev et Singer; *Poria bombycinia* (Fr. : Fr.) Cooke / Pilát, 1940 / Transcarp (1, 7, 96), Carp (1, 174), RFS (147).

133. **Auriporia aurea**<sup>3</sup> (Peck) Ryvarden — *Chaetoporellus aureus* (Peck) Bondartsev et Singer; *Poria aurea* Peck / Pilát, 1940 / Transcarp (1, 7, 96).

134. **Daedalea quericina** L. : Fr. — *Trametes quericina* (L. : Fr.) Pilát / CWU (Myc) Kh-247; KW 9872–9899, 9901, 9902, 28835–28843, 28850–28853 / Léveillé, 1842 / WP (71, 139, 143, 174), RP (42, 85, 174), LP (5, 11, 160, 170, 174), Rozt (1, 4, 174), Transcarp (1, 96, 109), Carp (1, 94, 174), Precarp (1, 174), WFS (48, 68, 148, 174), RFS (98, 145, 147), LFS (10, 15, 16, 31, 159, 161, 174), RGMS (115, 116, 118, 120, 123, 128, 133), LGMS (101, 113, 115, 116, 118, 120, 123, 128, 133, 167), DFS (52, 58, 78, 117, 174), RGS (115, 116, 118–120, 123, 128, 133), LGS (115, 116, 118–120, 123, 128, 133, 165), FScr (174), MCr (40, 73, 105, 174), Ukraine (19, 21).

135. **Fomitopsis pinicola** (Sw. : Fr.) P. Karst — *Fomes marginatus* Fr.; *F. pinicola* (Sw. : Fr.) Cooke; *F. unguilatus* Fr.; *Polyporus marginatus* Fr.; *P. unguilatus* Schaeff. / CWU (Myc) Kh-248; KW 18348–18352, 19073, 19094, 19100, 19101, 28025, 28028–28030 / Borsców, 1869 / WP (17, 71, 140, 141, 143, 174), RP (17, 174), LP (11, 131, 170, 174), Rozt (1, 4, 150, 174), Transcarp (1, 74, 96, 107, 108–110), Carp (1, 22, 24, 37, 38, 106, 174), Precarp (1, 158, 174), WFS (48, 68, 174), RFS (174), LFS (16, 161), RGMS (118, 128), LGMS (118, 128, 167), DFS (52), RGS (118, 128), LGS (118, 128), MCr (40, 105, 174).

136. **Fomitopsis rosea** (Alb. et Schwein. : Fr.) P. Karst. — *Fomes roseus* (Alb. et Schwein. : Fr.) Cooke / KW 19041, 19042 / Pilát, 1940 / RP (130, 174), LP (7, 130, 131), Transcarp (1, 7, 96, 108, 109), Carp (1, 37, 38, 130, 174), Precarp (1, 130, 174), MCr (7, 105, 174), Ukraine (21).

137. **Pilatoporus epileucinus** (Pilát) Kotl. et Pouzar — *Coriolus epileucus* (Fr.) Bondartsev ss. Bondartsev; *Fomitopsis epileucina* (Pilát) Ryvarden et Gilb.; *Leptoporus epileucinus* Pilát ex Pilát / Pilát, 1940 / Transcarp (1, 96), RGMS (118), LGMS (118, 167), RGS (118), LGS (118).

138. **Piptoporus betulinus** (Bull. : Fr.) P. Karst. — *Polyporus betulinus* Bull. : Fr. / CWU (Myc) Kh-249 / Borsców, 1869 / WP (71, 137, 138, 140, 143), RP (44), LP (11, 131, 160, 170), Rozt (1, 4), Transcarp (1, 74, 96, 107–109), Carp (1, 174), Precarp (1, 174), WFS (48), RFS (98, 147), LFS (159, 161), RGMS (115, 128), LGMS (115, 128, 167), DFS (52), RGS (115, 128), LGS (115, 128).

---

<sup>3</sup> The description of *Auriporia aurea* given by Pilát (1940) and repeated by Bondartsev (1953) fits to the species concept of *A. aurulenta* David, Tortić et Jelić.

139. **Piptoporus quercinus** (Schrad. : Fr.) Pilát / Pilát, 1940 / Transcarp (1, 7, 96), Carp (1, 174).

\* 140. **Postia alni** Niemelä et Vampola — *P. subcaesia* (A. David) Jülich / CWU (Myc) Kh-224 / LFS (Kharkiv City, south part of the Forest Park, fragment of ravine forest, on dead unfallen trunk of *Quercus* sp., coll. A.S. Usichenko, D.V. Leontyev IX 2002).

141. **Postia balsamea** (Peck) Jülich — *Oligoporus balsameus* (Peck) Gilb. et Ryvarden; *Tyromyces kymatodes* (Rostk.) Donk / Bondartsev, 1953 / WFS (7, 174), RFS (174).

142. **Postia caesia** (Schrad. : Fr.) P. Karst. — *Leptoporus caesius* (Schrad. : Fr.) Quél.; *Oligoporus caesius* (Schrad. : Fr.) Gilb. et Ryvarden; *Polyporus caesius* Schrad. : Fr.; *Tyromyces caesius* (Schrad. : Fr.) Murrill / Bobiyak, 1907 / RP (130, 174), LP (7, 130, 131), Rozt (1, 4, 130, 174), Transcarp (1, 7, 96), Carp (1, 37, 38, 130, 174), WFS (7, 130, 174), LGMS (101), MCr (7, 130, 105, 174).

143. **Postia cerifluua** (Berk. et M.A. Curtis) Jülich — *Leptoporus minusculoides* Pilát; *L. revolutus* (Bres.) Bourdot et Galzin; *Oligoporus cerifluus* (Berk. et M.A. Curtis) Gilb. et Ryvarden; *Tyromyces minusculoides* (Pilát) Bondartsev; *T. revolutus* (Bres.) Bondartsev et Singer / Pilát, 1940 / Transcarp (1, 7, 96).

144. **Postia floriformis** (Quél.) Jülich — *Leptoporus floriformis* (Quél.) Bourdot et Galzin; *Oligoporus floriformis* (Quél.) Gilb. et Ryvarden; *Tyromyces floriformis* (Quél.) Bondartsev et Singer / Pilát, 1940 / RP (174), LP (7), Transcarp (1, 7, 96), Carp (1, 174).

145. **Postia fragilis** (Fr.) Jülich — *Leptoporus fragilis* (Fr.) Pat.; *Oligoporus fragilis* (Fr.) Gilb. et Ryvarden; *Tyromyces fragilis* (Fr.) Donk / KW 17859 / Pilát, 1940 / RP (130, 174), LP (7, 130, 131), Transcarp (1, 7, 96), Carp (1, 130, 174), LGMS (167).

146. **Postia hibernica** (Berk. et Broome) Jülich — *Chaetoporellus simanii*<sup>4</sup> (Pilát) Bondartsev; *Leptoporus simanii* Pilát ex Pilát; *Oligoporus hibernicus* (Berk. et Broome) Gilb. et Ryvarden / Pilát, 1940 / Transcarp (1, 7, 96).

147. **Postia lactea** (Fr.) P. Karst. — *Leptoporus lacteus* (Fr.) Quél.; *Polyporus lacteus* Fr.; *Tyromyces lacteus* (Fr. : Fr.) Murrill / Gutsevich, 1940; Pilát, 1940 / LP (130, 131), Transcarp (74, 96), Carp (130, 174), LGMS (167), RGS (130), MCr (7, 40, 130, 174), Cr (105).

148. **Postia leucomallella** (Murrill) Jülich — *Leptoporus lowei* Pilát, nom. inv. (sine diagn. latin.); *Oligoporus leucomallillus* (Murrill) Gilb. et Ryvarden; *O. lowei* (Pilát) Gilb. et Ryvarden; *Tyromyces lowei* (Pilát) Bondartsev; *T. trabeus* (Rostk.) Parmasto / Pilát, 1940 / LP (130, 131), Transcarp (1, 7, 96).

149. **Postia rennyi** (Berk. et Broome) Rajchenb. — *Fibroporia destructor* (Fr.) Parmasto; *Leptoporus destructor* (Schrad. : Fr.) Bondartsev et Singer; *L. resupinatus*

<sup>4</sup> Some authors consider *Postia simanii* (Pilát) Jülich (= *Chaetoporellus simanii*, *Leptoporus simanii*, *Oligoporus simanii* (Pilát) Bernicchia) as presumably conspecific with *Postia hibernica*: "This species is closely related to *O. hibernicus* and they may be forms of a single species. However, it seems that the spores of *O. hibernicus* are wider and longer (up to 6 µm long and 1.2–1.5 µm wide), it grows preferably on conifers, and cystidia are usually absent" (Nuñez, Ryvarden, 2001: 373).

(Bourdot et Galzin) Pilát; *Oligoporus rennyi* (Berk. et Broome) Donk; *Polyporus destructor* Schrad. : Fr.; *Tyromyces resupinatus* (Bourdot et Galzin ex Pilát) Bondartsev et Singer / Bobiyak, 1907 / RP (44, 174), LP (131, 174), Rozt (4, 174), Transcarp (7, 96), Carp (174), WFS (7), LFS (174), LGMS (167).

150. **Postia sericeomollis** (Romell) Jülich — *Oligoporus sericeomollis* (Romell) Bondartseva; *Tyromyces sericeomollis* (Romell) Bondartsev et Singer / Gutsevich, 1940; Pilát, 1940 / Transcarp (1, 7, 96), Carp (1, 174), RFS (174), MCr (40, 174).

151. **Postia stiptica** (Pers. : Fr.) Jülich — *Leptoporus fodinarus* (Velen.) Pilát; *L. stipticus* (Pers. : Fr.) Quél.; *Oligoporus stipticus* (Pers. : Fr.) Gilb. et Ryvarden; *Polyporus albidus* Fr.; *P. stipticus* Pers.; *Tyromyces albidus* (Secr.) Donk. / CWU (Myc) Kh-156 / Bobiyak, 1907 / RP (44, 130, 174), LP (130, 131, 170), Rozt (1, 4), Transcarp (1, 7, 96), Carp (1, 130, 174), LFS (159), LGMS (101), MCr (130, 105, 174).

152. **Postia tephroleuca** (Fr.) Jülich — *Leptoporus lacteus* f. *tephroleucus* (Fr.) Bourdot et Galzin; *Oligoporus tephroleucus* (Fr. : Fr.) Gilb. et Ryvarden; *Tyromyces melinus* (P. Karst.) Bondartsev et Singer; *T. tephroleucus* (Fr. : Fr.) Donk; *Polyporus tephroleucus* Fr. : Fr. / CWU (Myc) Kh-172 / Gutsevich, 1940; Pilát, 1940 / LP (130, 131), Transcarp (1, 7, 74, 96), Carp (1, 130, 174), LFS (159), LGMS (101, 167), RGS (130), MCr (7, 40, 130, 174), Cr (105).

153. **Postia undosa** (Peck) Jülich — *Leptoporus undosus* (Peck) Pilát; *Oligoporus undosus* (Peck) Gilb. et Ryvarden; *Tyromyces undosus* (Peck.) Murrill / Pilát, 1940 / Transcarp (1, 7, 96), Carp (1, 174), LGMS (101, 174).

#### Fam. **Ganodermataceae** Donk per Donk

212. **Climacodon pulcherrimus** (Berk. et M.A. Curtis) Nikol. — *Dryodon pulcherrimus* (Berk. et M.A. Curtis) Pilát; *Hydnnum pulcherrimum* Berk. et M.A. Curtis / Pilát, 1940 / RP (174), Transcarp (1, 96), RFS (88), LFS (88), SCr (50, 105), MCr (174), Cr (88).

213. **Climacodon septentrionalis** (Fr. : Fr.) P. Karst. — *Hydnnum septentrionale* Fr. / Bobiyak, 1907 / RP (174), Rozt (1, 4, 174), Transcarp (1, 96).

---

<sup>5</sup> In Zerova *et al.* (1972) the name *Poria undata* was synonymized with *Podoporia vitrea* and in this wide sense indicated for Ukrainian Carpathians (Carp.).

214. ***Crustoderma dryinum*** (Berk. et M.A. Curtis) Parmasto — *Coniophorella crocea* (P. Karst.) Rick / Pilát, 1940 / Transcarp (1, 96).
215. ***Cylindrobasidium evolvens*** (Fr. : Fr.) Jülich — *Basidioradulum evolvens* (Fr. : Fr.) Parmasto; *Corticium evolvens* (Fr. : Fr.) Fr.; *C. laeve* Pers. : Fr. ss. auct. Ukr.<sup>6</sup> / CWU (Myc) Kh-17, 60, 64, 182 / Borsców, 1869 / RP (44, 174), LP (6, 11, 131), Rozt (1, 4, 174), Transcarp (96), Carp (1, 174), LFS (159), LGMS (101, 167), Ukraine (21).
216. ***Dacryobolus karstenii*** (Bres.) Oberw. ex Parmasto; *Stereum karstenii* Bres. / Pilát, 1940 / Transcarp (1, 96), WFS (20).
217. ***Dacryobolus sudans*** (Alb. et Schwein. : Fr.) Fr. — *Odontia sudans* (Alb. et Schwein. : Fr.) Bres. / CWU (Myc) S-7<sup>7</sup> / Pilát, 1940 / LP (Sumy oblast, Desnyans'ko-Starohuts'kyi National Natural Park, on strongly decayed deciduous wood, coll. A.Yu. Akulov, A.S. Usichenko VIII 2001), Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), WFS (88, 174), RFS (174), LFS (174), Cr (88, 174).
218. ***Gloeoporus dichrous*** (Fr. : Fr.) Bres. — *Polyporus dichrous* Fr. / CWU (Myc) Kh-252 / Hizhyts'ka, 1929 / RP (44, 174), Transcarp (1, 7, 74, 96), Carp (1, 174), LFS (7, 159, 174), MCr (7, 40, 174).
219. ***Gloeoporus taxicola*** (Pers. : Fr.) Gilb. et Ryvarden — *Meruliodipsis taxicola* (Pers. : Fr.) Bondartsev in Parmasto; *Polyporus rufus* Schrad.; *Poria taxicola* (Pers. : Fr.) Bres. / CWU (Myc) Kh-127 / Bobiyak, 1907 / WP (103), RP (103, 174), LP (131), Rozt (1, 4), LFS (159), RGMS (118), LGMS (101, 118, 167, 174), RGS (118), LGS (118).
220. ***Mycoaciella bispora*** (Stalpers) J. Erikss. et Ryvarden — *Sarcodontia denticulata* (Pers. non auct.) Nikol. / Nikolajeva, 1961 / LGMS (167), Cr (88, 174).
221. ***Phlebia aurea*** (Fr. : Fr.) Nakasone — *Acia stenodon* (Pers.) Bourdot et Galzin; *Sarcodontia stenodon* Nikol. / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174).
222. ***Phlebia bresadolae*** Parmasto — *Corticium deflectens* ss. Bres., 1903 non (P. Karst.) P. Karst., 1889 / Bondartsev, 1927 / LP (6).
223. ***Phlebia centrifuga*** P. Karst. — *Phlebia mellea* Overh. / Pilát, 1940 / Transcarp (1, 96).
- var. ***roseoinhalata*** Pilát — *Phlebia mellea* var. *roseoinhalata* Pilát / Pilát, 1940 / Transcarp (1, 96).
- var. ***roseomarginata*** Pilát — *Phlebia mellea* var. *roseomarginata* Pilát / Pilát, 1940 / Transcarp (1, 96).
224. ***Phlebia fuscoatra*** (Fr. : Fr.) Nakasone — *Hydnium fuscoatrum* Fr. : Fr.; *Mycoleptodon fuscoater* (Fr. : Fr.) Pilát; *Odontia fuscoatra* (Fr. : Fr.) Bres.; *Radulum membranaceum* (Bull. : Fr.) Bres.; *Steccherinum fuscoatrum* (Fr. : Fr.) Gilb. / Pilát, 1940 / WP (174), RP (174), LP (174), Rozt (1, 174), Transcarp (1, 96), Carp (1, 174), WFS (174), LFS (88, 174), RFS (88, 174), LGMS (167), FScr (174), MCr (174), SSCr (174), Cr (88).

<sup>6</sup> The description of *Corticium laeve* Fr. in Zerova et al. (1972: 28) in general fits to the species concept of *Cylindrobasidium evolvens* except of spore form (cylindrical in this source versus pip-shaped or citriform in typical *C. evolvens*).

<sup>7</sup> The single examined herbarium specimen is very poor, without cystidia and mature basidia and so the more correct formulation of its identification should be *Dacryobolus* cf. *sudans*.

225. **Phlebia livida** (Pers. : Fr.) Bres. — *Corticium lividum* Pers. : Fr. / Bobiyak, 1907 / Rozt (1, 4), Transcarp (1, 96).

226. **Phlebia radiata** Fr. : Fr. — *Phlebia aurantiaca* (Sowerby) J. Schröt.; *Ph. merismooides* (Fr. : Fr.) Fr. / CWU (Myc) Kh-28a, 175, 178 / Léveillé, 1842 / RP (44), LP (170), Rozt (1, 4, 174), Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), LFS (159), LGMS (167), MCr (73).

227. **Phlebia rufa** (Pers. : Fr.) M.P. Christ. — *Merulius phlebioides* Bourdot et Galzin; *M. rufus* Pers. : Fr. / CWU (Myc) Kh-10, 13 / Gutsevich, 1940; Pilát, 1940 / Rozt (1, 174), Transcarp (1, 74, 96), Carp (1, 174), Precarp (1, 174), RFS (147), LFS (125, 159), LGMS (167), DFS (125), RGS (119), LGS (119), MCr (40, 174).

228. **Phlebia serialis** (Fr. : Fr.) Donk — *Peniophora serialis* (Fr. : Fr.) Höhn. et Litsch. / Bondartsev, 1927 / LP (6, 174).

229. **Phlebia subochracea** (Bres.) J. Erikss. et Ryvarden — *Acia subochracea* (Bres.) Bourdot et Galzin; *Mycoacia subochracea* (Bres.) Parmasto; *Ph. plumbea* Parmasto; *Sarcodontia subochracea* (Bres.) Nikol. / Pilát, 1940 / KW 18343, 18891 / LP (132), Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), WFS (88).

230. **Phlebia tremellosa** (Schrad. : Fr.) Nakasone et Burds. — *Merulius tremellosus* Schrad. : Fr. / CWU (Myc) Kh-169 / Bobiyak, 1907 / RP (44, 85, 174), LP (170, 174), Rozt (1, 4, 174), Transcarp (1, 96), Carp (1, 94, 174), Precarp (1, 174), RFS (174), LFS (159), RGMS (118, 121), LGMS (167, 118, 121), RGS (118, 121), LGS (118, 121), MCr (40, 174).

231. **Phlebia uda** (Fr. : Fr.) Nakasone — *Acia uda* (Fr. : Fr.) Bourdot et Galzin; *Mycoacia uda* (Fr. : Fr.) Donk; *Sarcodontia uda* (Fr. : Fr.) Nikol. / Pilát, 1940 / WP (174), RP (174), LP (174), VFS (174), Rozt (1, 174), Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), WFS (88), LGMS (174), Cr (88, 174).

232. **Resinicium bicolor** (Alb. et Schwein. : Fr.) Parmasto — *Hydnnum subtile* Fr. : Fr.; *Odontia bicolor* (Alb. et Schwein. : Fr.) Quél. / CWU (Myc) R-3 / Pilát, 1940 / Rozt (1, 4), Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), WFS (88, 174), RFS (88, 174), LFS (88, 174).

233. **Scopuloides rimosa** (Cooke) Jülich — *Odontia hydnoides* (Cooke et Massee) Höhn.; *S. hydnoides* (Cooke et Massee) Hjortstam et Ryvarden / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), WFS (88), SCr (50), Cr (88, 174).

#### Fam. Phanerochaetaceae Jülich

234. **Ceraceomyces borealis** (Romell) J. Erikss. et Ryvarden — *Merulius borealis* Romell / Pilát, 1940 / Transcarp (1, 96).

235. **Ceraceomyces microsporus** K.H. Larss. in K.H. Larss. et E. Larss. / CWU (Myc) Kh-46, S-16 / Usichenko, 2002 / LP (Sumy oblast, Desnyans'ko-Starohuts'kyi National Natural Park, on fallen branches of unknown deciduous species, coll. A.Yu. Akulov, A.S. Usichenko VIII 2001), LFS (159).

236. **Ceraceomyces serpens** (Tode : Fr.) Ginns — *Merulius crispatus* O.F. Müll. : Fr.; *M. porinoides* Fr. : Fr.; *M. porinoides* ssp. *crispatus* (O.F. Müll. : Fr.) Bourdot et Galzin / CWU (Myc) S-28 / Pilát, 1940 / LP (Sumy oblast, Desnyans'ko-Starohuts'kyi National Natural Park, on still-attached branches of *Acer* sp., coll.

A.Yu. Akulov, A.S. Usichenko VIII 2001), Rozt (1, 174), Transcarp (1, 74, 96), Carp (1, 174), Precarp (1, 174).

237. **Hyphodermella corrugata** (Fr.) J. Erikss. et Ryvarden — *Odontia junquillea* Quél. / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174), Precarp (1, 174), WFS (88).

238. **Phanerochaete deflectens** (P. Karst.) Hjortstam — *Grandinia deflectens* P. Karst. / Pilát, 1940 / LP (174), Transcarp (1, 96), Carp (1, 174), WFS (88), RFS (147).

239. \***Phanerochaete jose-ferreirae** (D.A. Reid) D.A. Reid / CWU (Myc) S-9 / LP (Sumy oblast, near Znob'-Novhorods'kyi settlement, leaf forest, on strongly decayed branch of cf. *Populus*, coll. A.Yu. Akulov, A.S. Usichenko VIII 2001).

240. **Phanerochaete laevis** (Pers. : Fr.) J. Erikss. et Ryvarden — *Kneiffia laevis* (Pers. : Fr.) Bres.; *Peniophora affinis* Burt; *P. laevis* (Pers. : Fr.) Burt. / CWU (Myc) Kh-22, 40 / Solomakhina, 1956 / WP (140, 136), RFS (147), LFS (159).

241. **Phanerochaete magnoliae** (Berk. et M.A. Curtis) Burds. — *Radulum cumulodentatum* Nikol. / Solomakhina, 1998 / RFS (147).

242. **Phanerochaete sanguinea** (Fr. : Fr.) Pouzar — *Peniophora sanguinea* (Fr. : Fr.) Höhn. et Litsch. / Pilát, 1940 / LP (6, 174), Transcarp (1, 96), Carp (1, 174).

243. **Phanerochaete sordida** (P. Karst.) J. Erikss. et Ryvarden — *Peniophora cremea* (Bres.) Sacc. et Syd. / CWU (Myc) S-8, 23a, 36, 52 / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174), LFS (159).

244. **Phanerochaete tuberculata** (P. Karst.) Parmasto — *Corticium lacteum* (Fr. : Fr.) Fr. / KW 1116 / Bobiyak, 1907 / RP (44, 174), LP (6, 174), Rozt (4, 174), Transcarp (96), Carp (174), DFS (117).

245. **Phanerochaete velutina** (DC. : Fr.) P. Karst. — *Kneiffia velutina* (DC. : Fr.) Bres.; *Peniophora velutina* (DC. : Fr.) Cooke / CWU (Myc) S-46 / Bondartsev, 1927 / WP (144), LP (6, 174), Transcarp (1, 96), Carp (1, 174).

246. **Phlebiopsis gigantea** (Fr. : Fr.) Jülich — *Corticium giganteum* (Fr. : Fr.) Fr.; *Peniophora gigantea* (Fr. : Fr.) Massee; *Phlebia gigantea* (Fr. : Fr.) Donk / CWU (Myc) Do-1 / Bondartsev, 1927 / WP (17), RP (17, 44, 174), LP (5, 131, 174), Transcarp (1, 96), Carp (1, 174), RGMS (118, 121), LGMS (118, 121, 125, 167, 174), DFS (Donetsk oblast, Krasnolymans'kyi State Forest Economy, Torskoe forestry, on stump of *Pinus sylvestris*, coll. A.S. Usichenko IX 2002), RGS (118, 121), LGS (118, 121), MCr (53), Ukraine (21).

247. **Porostereum spadiceum** (Pers. : Fr.) Hjortstam et Ryvarden — *Lloydella spadicea* (Pers. : Fr.) Bres.; *Lopharia spadicea* (Pers. : Fr.) Boidin; *Stereum spadiceum* (Fr. : Fr.) Quél. / CWU (Myc) Kh-25, 189 / Bobiyak, 1907 / LP (6, 160), Rozt (1, 4), Transcarp (1, 96), WFS (20), LFS (159), Cr (20).

248. **Terana caerulea** (Lam. : Fr.) Kuntze — *Corticium caeruleum* (Lam. : Fr.) Fr. / Bobiyak, 1907 / Rozt (1, 4), RGS (66), LGS (66), SSCr (53).

#### Fam. *Podoscyphaceae* D.A. Reid

249. **Cotylidia pannosa** (Sowerby : Fr.) D.A. Reid — *Thelephora pallida* (Pers. : Fr.) Pers. / Bobiyak, 1907 / Rozt (1, 4).

250. **Cyphelostereum laeve** (Fr. : Fr.) D.A. Reid — *Cyphella muscicola* Pers.; *C. muscigena* (Pers.) Fr. / KW 40764 / Bobiyak, 1907 / Rozt (4, 174), Transcarp (1, 96), Carp (1, 174), MCr (67, 174).

Fam. Polyporaceae Corda

251. **Amyloporia xantha** (Fr.) Bondartsev et Singer — *Antrodia xantha* (Fr.) Ryvarden; *Poria calcea* var. *xantha* Bourdot et Galzin; *P. xantha* (Fr. : Fr.) Cooke ss. Bres. / Bobiyak, 1907 / LP (130, 131), Transcarp (1, 7, 96), Carp (1, 130, 174), MCr (40, 130, 174).

252. **Cerrena unicolor** (Bull. : Fr.) Murrill — *Daedalea latissima* Fr.; *D. unicolor* Bull. : Fr.; *Trametes unicolor* (Bull. : Fr.) Pilát / KW 2670, 2671, 28762, 28770, 40182, 40183 / Borsčów, 1869 / RP (44, 162, 174), LP (11, 170), Rozt (1, 4, 150, 174), Transcarp (1, 74, 96, 109), Carp (1, 174), Precarp (1, 174), WFS (48, 148, 174), RFS (147), LFS (16, 57), RGMS (116, 118, 128), LGMS (101, 116, 118, 128, 167), DFS (57, 78, 117), RGS (116, 118, 119, 128), LGS (116, 118, 119, 128), SCr (49, 50, 105), MCr (40, 105, 174).

253. **Coriolopsis gallica** (Fr.) Ryvarden — *C. gallica* f. *resupinato-reflexa* Bourdot et Galzin; *Funalia extenuata* (Durieu et Mont.) Domański; *F. gallica* (Fr.) Bondartsev et Singer / Bondartsev, 1953 / RGMS (115), LGMS (114, 115, 167), RGS (115), LGS (115), SCr (50, 105), MCr (7, 105, 174), SSCr (105).

254. **Coriolopsis trogii** (Berk. in Trog) Domański — *Funalia trogii* (Berk.) Bondartsev et Singer; *Trametes hispida* Bagl.; *T. trogii* Berk. / CWU (Myc) Kh-141, 171 / Yavorskii, 1915 / LP (103, 160, 170, 174), WP (174), RP (174), Rozt (150), Carp (1, 174), Precarp (1, 174), RFS (147), LFS (159), RGMS (118, 128), LGMS (101, 118, 128, 167), DFS (52), RGS (118, 119, 128), LGS (118, 119, 128), MCr (40), SSCr (51).

255. **Daedaleopsis confragosa** (Bolton : Fr.) J. Schröt. — *Daedalea confragosa* Bolton : Fr.; *Trametes confragosa* (Bolton : Fr.) Rabenh. / CWU (Myc) Kh-253 / Bobiyak, 1907 / WP (142, 174), RP (174), LP (160), Rozt (1, 4, 150, 174), Transcarp (1, 7, 96, 107–110), Carp (1, 106, 174), Precarp (1, 174), WFS (174), RFS (98, 145, 147), LFS (159, 161), LGMS (113), LGS (165), MCr (7).

f. **bulliardii** (Fr.) Donk / Bobiyak, 1907 / Rozt (1, 4), RGMS (118), LGMS (118, 127, 167), RGS (118), LGS (118).

f. **rubescens** (Alb. et Schwein.) Donk — *Daedalea confragosa* f. *rubescens* (Alb. et Schwein.) Donk; *Trametes rubescens* (Alb. et Schwein.) Fr. / Petrak, 1925 / Transcarp (109), Carp (94), LGMS (167), MCr (40).

256. **Daedaleopsis tricolor** (Bull. : Fr.) Bondartsev et Singer — *Daedaleopsis confragosa* var. *tricolor* (Bull. : Fr.) Bondartsev; *Lenzites tricolor* Bull. : Fr.; *Trametes confragosa* f. *tricolor* Bull. : Fr. / CWU (Myc) Khm-1; KW 9937 / Pilát, 1940 / LP (7), Transcarp (1, 7, 74, 96, 109), WFS (7, 148), RFS (98), LGMS (167), MCr (7).

257. **Datronia mollis** (Sommerf. : Fr.) Donk — *Antrodia mollis* (Sommerf. : Fr.) P. Karst; *Trametes mollis* Sommerf. : Fr. / CWU (Myc) Kh-70, 86, 88 / Bobiyak, 1907 / Rozt (1, 174), Transcarp (1, 96), Carp (1, 174), LFS (159), LGMS (167), RGS (119), LGS (119), MCr (7, 174), Cr (105).

258. **Datronia stereoides** (Fr. : Fr.) Ryvarden — *Trametes stereoides* (Fr. : Fr.) Bourdot et Galzin / Pilát, 1940 / Transcarp (1, 96).

259. **Dichomitus campestris** (Quél.) Domański et Orlicz — *Coriolellus campestris* (Quél.) Bondartsev; *Trametes campestris* Quél. / CWU (Myc) Kh-163 / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174), LFS (159), LGMS (101, 174), MCr (7, 105, 174).

260. **Dichomitus squalens** (P. Karst.) D.A. Reid — *Coriolellus squalens* (P. Karst.) Bondartsev et Singer; *Trametes squalens* P. Karst. / CWU (Myc) Kh-107, 138 / Gutsevich, 1940 / RP (174), LFS (159), LGMS (101, 174), MCr (7, 40, 174).

261. **Fomes fomentarius** (L. : Fr.) Fr. — *Polyporus fomentarius* L. : Fr. / KW 18353, 18355–18357, 18359, 18361, 18362, 18364, 18365, 18374, 18375, 18377–18381 / Borsców, 1869 / WP (71, 137, 138, 140, 143, 174), RP (44, 162, 174), LP (11, 160, 170, 174), Rozt (1, 4, 150, 174), Transcarp (1, 74, 96, 107–110), Carp (1, 24, 36, 38, 155, 174), Precarp (1, 174), WFS (48, 68, 174), RFS (3, 98, 145, 147), LFS (57, 159, 161), RGMS (72, 115, 116, 120, 128, 133), LGMS (83, 101, 113, 115, 116, 120, 128, 133, 167, 174), DFS (52, 57, 117, 174), RGS (115, 116, 120, 128, 133), LGS (115, 116, 120, 128, 133), SCr (12, 49, 105, 174), FSCr (105, 174), MCr (40, 73, 105, 152, 174), SSCr (105, 174).

262. **Haploporus suaveolens** (L. : Fr.) Donk — *Haploporus odorus* (Sommerf. : Fr.) Bondartsev et Singer; *Trametes odora* Sommerf. : Fr. / Bobiyak, 1907 / Rozt (1, 4).

263. **Laetiporus sulphureus** (Bull. : Fr.) Murrill — *Grifola sulphurea* (Bull. : Fr.) Pilát; *L. sulphureus* f. *imbricatus* (Fr.) Bondartsev et Singer; *Polyporus sulphureus* Bull. : Fr. / CWU (Myc) Kh-254; KW 17545, 17548, 17559, 17561, 17562, 17578, 17604, 17608, 17609, 17612, 17615, 17617, 17620 / Val'ts, Rishavi, 1871 / WP (71, 137–139, 174), RP (44, 65, 77, 162, 174), LP (5, 131, 160, 170), Rozt (1, 4, 150, 174), Transcarp (1, 74, 96, 107, 109), Carp (1, 111, 174), Precarp (158), WFS (48, 68, 174), RFS (145, 147, 174), LFS (15, 16, 56, 57, 159, 161, 174), RGMS (115, 116, 120, 128, 174), LGMS (100, 101, 113, 115, 116, 120, 128, 167), DFS (52, 57, 117, 174), RGS (115, 116, 119, 120, 128), LGS (115, 116, 119, 120, 128), SCr (50, 105), MCr (40, 105, 174), Cr (59).

264. **Laricifomes officinalis** (Vill. : Fr.) Kotl. et Pouzar — *Fomitopsis officinalis* (Vill. : Fr.) Bondartsev et Singer / Zerova et al., 1972 / Rozt (1, 174), Carp (1, 174).

265. **Lenzites betulina** (L. : Fr.) f. **caput-medusae** (Bull. : Fr.) Nikol. — *Hydnnum caput-medusae* Bull. : Fr. / Sosin, 1940 / WFS (148).

345. **Mucronella calva** (Alb. et Schwein. : Fr.) Fr. — *M. aggregata* Fr. / Hizhyts'ka, 1929 / RP (44), Transcarp (96, 174), Carp (174), WFS (88), RFS (88, 147), LFS (88, 112), Cr (88, 174).

#### Fam. *Lachnocladiaceae* D.A. Reid

346. **Asterostroma ochroleucum** Bres. — *A. cervicolor* (Berk. et M.A. Curtis) Massee / Pilát, 1940 / Transcarp (1, 9, 96), Carp (9), Precarp (9).

347. **Dichostereum boreale** (Pouzar) Ginns et M.N.L. Lefebvre — *Asterostromella granulosa* (Pers. : Fr.) Bourdot et Galzin; *D. granulosum* (Pers. : Fr.) Boidin et Lanquetin; *Grandinia granulosa* (Pers. : Fr.) P. Karst.; *Vararia granulosa* (Pers. : Fr.) Laurila / KW 17900 / Bobiyak, 1907 / LP (132), Rozt (1, 4), Transcarp (1, 96).

348. \***Dichostereum durum** (Bourdot et Galzin) Pilát / CWU (Myc) S-11, 18 / LP (Sumy oblast, near Znob'-Novhorods'kyi settlement, leaf forest, on fallen twigs of *Fraxinus* sp., coll. A.Yu. Akulov, A.S. Usichenko VIII 2001).

349. **Scytinostroma aluta** Lanquetin / CWU (Myc) Cr-9 / Bondartseva, Parmasto, 1986 / Transcarp (9), MCr (Anhars'kyi Mountain Pass, Demerdzhy Mt., on still-attached branch of *Fagus* sp., coll. A.Yu. Akulov, A.S. Usichenko VIII 2001).

350. **Scytinostroma galactinum** (Fr.) Donk / CWU (Myc) Kh-19, 48 / Usichenko, 2002 / LFS (159).

351. **Scytinostroma odoratum** (Fr. : Fr.) Donk — *Corticium odoratum* (Fr. : Fr.) Bourdot et Galzin; *Stereum odoratum* (Fr. : Fr.) Fr. / Hizhyts'ka, 1929 / RP (44), Transcarp (1, 96).

352. **Scytinostroma portentosum** (Berk. et M.A. Curtis) Donk — *Corticium portentosum* Berk. et M.A. Curtis / Pilát, 1940 / Transcarp (1, 96).

353. **Vararia investiens** (Schwein.) P. Karst. / KW 17901 / Soldatova, 1985 / LP (132).

#### Fam. *Peniophoraceae* Lotsy

354. **Peniophora aurantiaca**<sup>9</sup> (Bres.) Höhn. et Litsch. — *Gloeopeniophora aurantiaca* (Bres.) Höhn. et Litsch. / Bondartsev, 1927 / LP (6, 174), Transcarp (1, 96).

355. **Peniophora cinerea** (Pers. : Fr.) Cooke — *Corticium cinereum* Pers. : Fr.; *Kneiffia cinerea* (Pers. : Fr.) Bres.; *Peniophora obscura* (Pers.) Bres.; *Thelephora cinerea* (Pers. : Fr.) Pers. / CWU (Myc) Kh-4, 21, 24, S-14, 20; KW 17600 / Léveillé, 1842 / RP (44, 174), LP (6, 160, 174), Rozt (1, 4, 174), Transcarp (1, 96), Carp (1, 94), LFS

---

<sup>9</sup> The earlier concept of this species included two currently accepted species, *P. erikssonii* (with clampless hyphae) and *P. aurantiaca* (with clamped hyphae, on *Alnus viridis* and *A. fruticosa* in subarctic and subalpine areas of Europe). The data listed in this entry evidently belong to *P. erikssonii* in Polissya, with certain likelihood of *P. aurantiaca* occurring in Carpathian region.

<sup>10</sup> Possibly some Ukrainian records of this rare for temperate areas species are belonged to related species, *Stereum subtomentosum* Pouzar (= *S. fasciatum* ss. auct. Eur.)

## ORDO THELEPHORALES CORNER EX OBERW.

## Fam. Bankeraceae Donk

389. **Bankera fuligineoalba** (Schmidt : Fr.) Pouzar — *Hydnnum fuligineo-album* Schmidt : Fr. / KW 18668, 18679 / LP (Chernihiv oblast, Semenov's'k district, near Semenovka village, on strongly destroyed wood, coll. M.Ya. Zerova X 1956)

390. **Boletopsis leucomelaena** (Pers. per Pers.) Fayod / Bondartsev, 1953 / LFS (7, 174).

391. **Hydnellum aurantiacum** (Fr.) P. Karst / Zerova et al., 1972 / Rozt (1, 174).

392. **Hydnellum concrescens** (Pers.) Bunker — *Calodon zonatus* (Batsch) P. Karst.; *Hydnellum zonatum* (Fr.) P. Karst.; *Hydnnum zonatum* Batsch / Bobiyak, 1907 / Rozt (1, 4, 174), Transcarp (1, 96), MCr (105).

393. **Hydnellum ferrugineum** (Fr. : Fr.) P. Karst. — *Hydnnum ferrugineum* (Fr.) P. Karst. / KW 18673 / Soldatova, 1975 / LP (131), RGMS (122, 167), LGMS (122, 167), RGS (122, 127), LGS (122).

394. **Hydnellum suaveolens** (Scop. : Fr.) P. Karst. / Zerova et al., 1972 / Rozt (1, 174), MCr (105), SSCr (105).

395. **Phellodon melaleucus** (Sw. : Fr.) P. Karst. — *Hydnnum graveolens* Pers. / Bobiyak, 1907 / LP (174), Rozt (1, 4), RGMS (121, 122), LGMS (121, 122, 167), RGS (119, 121, 122), LGS (119, 121, 122), MCr (105).

396. **Phellodon niger** (Fr. : Fr.) P. Karst. — *Hydnnum nigrum* Fr. : Fr. / Solomakhina, 1956 / WP (136, 141, 174).

397. **Phellodon tomentosus** (L. : Fr.) Bunker — *Hydnnum cyathiforme* Schaeff. / KW 18345, 18890 / Solomakhina, 1956 / WP (136, 174), RP (174), LP (174), Rozt (1, 174).

398. **Sarcodon imbricatus**<sup>11</sup> (L. : Fr.) P. Karst. — *Hydnnum imbricatum* L. / KW 18036 / Borsčów, 1869 / WP (174, 143, 135), RP (174), LP (11, 174), VFS (174), Rozt (1, 174), Transcarp (1, 96), LFS (15).

## Fam. Thelephoraceae Chevall.

399. **Pseudotomentella flavovires** (Höhn. et Litsch.) Svrček — *Tomentella flavovires* Höhn. et Litsch. / Pilát, 1940 / Transcarp (96).

400. **Pseudotomentella tristis** (P. Karst.) M.J. Larsen — *Tomentella umbrina* (Fr.) Litsch. in Pilát / Pilát, 1940 / Transcarp (96).

401. **Thelephora anthocephala** (Bull. : Fr.) Fr. / CWU (Myc) Kh-162; KW 17847 / Bondartsev, 1927 / RP (44, 174), LP (6, 174), LFS (159), RGMS (122), LGMS (122, 167), RGS (122), LGS (122), SCr (105).

var. **clavularis** (Fr.) Quél. — *Th. clavularis* Fr. / KW 17842 / Soldatova, 1975 / RGMS (122), LGMS (122, 167), RGS (122), LGS (122).

---

<sup>11</sup> *Sarcodon badius* (Pers.) Bourdot et Galzin [= *Hydnnum badium* Pers. ss. Nikol. / KW 18677 / Zerova, 1956 / LP (Kiev oblast, mixed forest (*Quercus-Pinus* community) near settlement Boyarka, on ground, coll. M.Ya. Zerova, X 1956), LFS (16)] has unclear taxonomical position and may be considered as synonym of either *S. imbricatus* or *S. lundellii* Maas Geest. et Nannf.

402. **Thelephora aff. arbuscula**<sup>12</sup> Corner / CWU (Myc) Kh-174 / Usichenko, 2002 / LFS (159).
403. **Thelephora atra** Weinm. / Hizhyts'ka, 1929 / RP (44).
404. **Thelephora caryophyllea** Schaeff. : Fr. — *Th. radiata* Fr. / KW 17851 / Bobiyak, 1907 / Rozt (1, 4), RGMS (122), LGMS (122, 167), RGS (122), LGS (122).
405. **Thelephora crustacea** Schumach. : Fr. — *Tomentella crustacea* (Schumach.) Höhn. et Litsch. / Pilát, 1940 / Transcarp (1, 96), Carp (1, 174).
406. **Thelephora palmata** Scop. : Fr. — *Phylacteria palmata* (Scop. : Fr.) Pat.; *Th. coralloides* Fr. / KW 17848 / Bobiyak, 1907 / RP (44, 174), LP (6, 131, 170, 174), Rozt (1, 4), Transcarp (1, 96), RGMS (122), LGMS (122, 167), RGS (122), LGS (122).
407. **Thelephora penicillata** Fr. — *Th. mollissima* Pers. : Fr. / Dobrovol'skii, Sosin, 1960 / Rozt (1), RGMS (23).
408. **Thelephora spongiosa** Schwein. : Fr. — *Tomentella spongiosa* (Schwein. : Fr.) Höhn. et Litsch. / Pilát, 1940 / Transcarp (1, 96).
409. **Thelephora terrestris** Ehrh. : Fr. — *Phylacteria terrestris* (Ehrh. : Fr.) Pat.; *Th. laciniata* Pers. / CWU (Myc) Kh-262; KW 2244-2247, 17810, 17817, 17822, 17827-17829, 17830-17833, 17835-17837, 17840-17843, 17848, 17849, 17851, 17893 / Borsc'ow, 1869 / WP (71), RP (44, 174), LP (5, 6, 11, 131, 160, 170, 174), Rozt (1, 4, 150, 174), Transcarp (1, 96), Carp (1, 106), WFS (68), RFS (147), LFS (15, 16, 159, 174), LGMS (100, 101, 113, 115, 118, 128, 167, 174), RGMS (23, 115, 118, 128), RGS (115, 118, 128), LGS (115, 118, 128), SSCr (105).
410. **Tomentella atramentaria** Rostr. — *T. flaccida* Bourdot et Galzin; *T. porulosa* (Bourdot et Galzin) Svrček / Pilát, 1940 / Transcarp (1, 96), RGMS (118), LGMS (118, 167), RGS (118), LGS (118).
411. **Tomentella badia** (Link) Stalpers — *T. atroviolacea* Litsch. / Pilát, 1940 / Transcarp (1, 96).
412. **Tomentella bryophila** (Pers.) M.J. Larsen — *T. fuscoferruginea* (Bres.) Litsch.; *T. spongiosa* var. *brevispina* Bourdot et Galzin; *T. subferruginea* (Burt) Donk / Pilát, 1940 / Rozt (64), Transcarp (1, 64, 96).
413. **Tomentella cinerascens** (P. Karst.) Höhn. et Litsch. — *T. subcervina* Litsch. in Pilát / Bondartsev, 1927 / RP (174), LP (6), Transcarp (1, 74, 96).
414. **Tomentella coerulea** (Bres.) Höhn. et Litsch. / Hizhyts'ka, 1929 / RP (44, 174), Rozt (64), LGMS (101, 174).
415. **Tomentella crinalis** (Fr.) M.J. Larsen — *Caldesiella ferruginosa* (Fr.) Sacc.; *Hydnium ferruginosum* Fr. / Bobiyak, 1907 / Rozt (1, 4), Transcarp (1, 96), LGMS (167), RGS (127).
416. **Tomentella ellisii** (Sacc.) Jülich et Stalpers — *T. microspora* (P. Karst.) Höhn. et Litsch. / KW 17939 / Wasser, Soldatova, 1977 / LGMS (167).
417. **Tomentella ferruginea** (Pers. : Fr.) Pat. — *Hypochnus ferrugineus* (Pers. : Fr.) Quél.; *T. coriaria* (Peck) Bourdot et Galzin; *T. fusca* (Pers.) J. Schröt. / KW 17938 / Bobiyak, 1907 / RP (174), LP (6, 174), Rozt (1, 4, 174), Transcarp (1, 64, 96), Carp (1, 174), WFS (174), RGMS (118), LGMS (118, 167), RGS (64, 118), LGS (118), Cr (64).

<sup>12</sup> This record indicates only the similarity of examined specimen with *Th. arbuscula*. The character of *Th. arbuscula* distribution makes the likelihood of its find in Ukraine very small.

418. **Tomentella fibrosa** (Berk. et M.A. Curtis) Köljalg — *T. bombycina* (P. Karst.) J. Erikss.; *Tomentellina bombycina* (P. Karst.) Bourdot et Galzin / Pilát, 1940 / Transcarp (1, 96), Ukraine (174).
419. **Tomentella fuscocinerea** (Pers. : Fr.) Donk — *Corticium macrosporum* Ellis et Everh.; *T. alutaceoumbrina* (Bres.) Litsch.; *T. macrospora* Höhn. et Litsch.; *T. mycophila* (Bourdot et Galzin) Svrček / Pilát, 1940 / Transcarp (1, 96).
420. **Tomentella italica** (Sacc.) M.J. Larsen — *Caldesiella italica* Sacc. / Pilát, 1940 / Transcarp (1, 96).
421. **Tomentella pilosa** (Burt) Bourdot et Galzin / Pilát, 1940 / Transcarp (1, 96).
422. **Tomentella punicea** (Alb. et Schwein. : Fr.) J. Schröt. — *T. atrovirens* (Bres.) Höhn. et Litsch.; *T. epiphylla* Bourdot et Galzin; *T. subrubiginosa* Litsch. / KW 17943 / Pilát, 1940 / RP (174), Transcarp (1, 96), Carp (1, 174), RFS (64), LGMS (167), SScR (64).
423. **Tomentella stuposa** (Link) Stalpers — *T. bresadolae* (Brinkmann) Höhn. et Litsch. / Pilát, 1940 / Rozt (64), Transcarp (1, 96), Carp (1, 174).
424. **Tomentella sublilacina** (Ellis et Holw.) Wakef. — *T. albomarginata* (Bourdot et Galzin) M.P. Christ. / Wasser, Soldatova, 1977 / Rozt (64), Transcarp (64), LGMS (167).
425. **Tomentella terrestris** (Berk. et Broome) M.J. Larsen / Köljalg, 1996 / Pre-carp (64).
426. **Tomentella testaceogilva** Bourdot et Galzin / Pilát, 1940 / Transcarp (1, 96).

## Doubtful data

427. **Ganoderma australe** (Fr. : Fr.) Pat. / Soldatova, 1975 / RGMS (123, 128), LGMS (123, 128, 167), RGS (123, 128), LGS (123, 128). This is the species with tropical and subtropical distribution. The taxon is close to *G. lipsiense*, and differs from it, besides geography, by larger spores (8.5–10 (12) × 5–7.5 µm) and thicker bast layer of cap (Nuñez, Ryvarden, 2000).
428. **Mycorrhaphium adustum** (Schwein.) Maas Geest. — *Mycoleptodon adustum* (Schwein.) Nikol. / Soldatova, 1985 / LP (132). The species is distributed in North America and East Asia.
429. **Phellinus lonicerus** (Bondartsev) Bondartsev et Singer / KW 17146, 18900-18907 / Soldatova, 1971 / RGMS (115, 120, 123), LGMS (113-115, 123, 167, 174), DFS (117), RGS (115, 120, 123), LGS (115, 120, 123). The species is distributed mostly in Middle Asia. Some authors consider *Phellinus lonicerus* as synonym of *Ph. linteus* (Berk. et M.A. Curtis) Teng (Bondartseva, Parmasto, 1986; Gilbertson, Ryvarden, 1994).
430. **Porostereum crassum** (Lév.) Hjortstam et Ryvarden — *Laxitextum crassum* (Lév.) Lentz / Soldatova, 1974 / RGMS (121), LGMS (121, 167), RGS (119, 121), LGS (119, 121). It is pantropical species, known from East and South Asia, Africa, America (Davydkina, 1980).
431. **Thelephora intybacea** Pers. / Bobiyak, 1907 / LP (170), Rozt (4). The species has areal out of West and Central Europe.

## Taxa with unknown correct name, dubious and confused names

432. **Ceraceomyces sublaevis** (Bres.) Jülich, nom. conf. — *Corticium sublaeve* Bres. ss. Zerova et al. / Zerova et al., 1972 / RP (174). The concept of *C. sublaevis* ss. auct. includes two current species, *C. eludens* and *C. microsporus*.

433. **Chaetoporus flavescens** (Bres.) Bondartsev et Singer / Wasser, 1971 / LGS (165).

434. **Corticium calceum** (Pers. : Fr.) Fr. / Bobiyak, 1907 as 'C. calceum Pers.' / Rozt (1, 4). *Corticium calceum* ss. Bourdot et Galzin is a synonym of *Sistotremastrum sueicum* Litsch. (Eriksson et al., 1984: 1377; Parmasto, 1997). At the same time it is a synonym of *Exidiopsis calcea* (Pers. : Fr.) K. Wells (Parmasto, 1997). Herbarium specimens collected by G. Bobiyak in 1907 were not accessible for examining, that does not allow to determine what species was published under this name.

435. **Corticium luteum** Bres. / Bondartsev, 1927 / LP (6), SSCr (53).

436. **Corticium microsporum** (Bres.) Herter, nom. conf. — *C. byssinum* var. *microsporum* Bres. / Pilát, 1940 / Transcarp (96). The concept of *C. microsporum* includes two current species, *Ceraceomyces eludens* and *Trechispora cohaerens*.

437. **Corticium straminicola** Pidopl. / Pidoplichko, 1948 / LGMS (95).

438. **Corticium sulfureomarginatum** Litsch. / Pilát, 1940 / Transcarp (1, 96). Probably *Amylocorticium canadense* (Burt) J. Erikss. et Weresub is correct name for the taxon.

439. **Cyphella citrispora** Pilát / Pilát, 1940 / Transcarp (96).

440. **Cyphella kaviniae** Pilát / Pilát, 1940 / Transcarp (96).

441. **Cyphella lacera** Pers. — *Merulius luteus* Secr. / Bobiyak, 1907 / Rozt (1, 4).

442. **Cyphella solenoides** P. Karst. / Pilát, 1940 / Transcarp (96).

443. **Grandinia mucida** Fr. — *Thelephora mucida* Fr. / Hizhyts'ka, 1929 / RP (44).

Probably this taxon is a species of the genus *Phanerochaete*.

444. **Hydnnum melliodorum** / Czerniaiev, 1845 / Ukraine (19).

445. **Hypochnus anthochrous** (Pers. : Fr.) Fr., nom. dub. / Bobiyak, 1907 / Rozt (1, 4).

446. **Irpea crispatus** Berk. in Cooke / Bobiyak, 1907 / Rozt (1, 4).

447. **Irpea crispus** Schaeff. / Bobiyak, 1907 / Rozt (4).

448. **Lenzites gigantea** Czern. , nom. dub. — *Cellularia gigantea* (Czern.) Kuntze / Czerniaiev, 1845 / Ukraine (19).

449. **Odontia diapiana** J. Schröt. / Solomakhina, Prudenko (1998) / RFS (147). Probably this is misspelling of *Odontia diaphana* (Schrad. : Fr.) Gray.

450. **Odontia obtusa** (Schrad. : Fr.) Gray, nom. dub. — *Hydnnum obtusum* Schrad. : Fr. / Zerova, 1948 / RP (77, 171).

451. **Polyporus subtomentosus** / Hizhyts'ka, 1929 as 'P. subtomentosum Fr.' / RP (44). Possible correct name is *Coltricia focicola* (Berk. et M.A. Curtis) Murrill.

452. **Poria nordmannii** (Lév.) Cooke, nom. dub. — *Polyporus nordmannii* Lév. / Leveille, 1842 / Cr (73, 129).

453. **Radulum tomentosum** Fr. / Bobiyak, 1907 / Rozt (1, 4).

454. **Schizophyllum abietinum** 'Schr.' / Isayeva, 1952 / WFS (48).

455. **Solenia araneosa** (Bourdot et Galzin) Cooke / Pilát, 1940 / Transcarp (96).

456. **Tomentella biennis** (Fr. : Fr.) A.M. Rogers, nom. dub. — *Thelephora biennis* Fr. : Fr / Bobiyak, 1907 / Rozt (1, 4).
457. **Tomentella jaapii** (Bres.) Bourdot et Galzin / Pilát, 1940 / Transcarp (1, 96).
458. **Tomentella ochraceofusca** / Pilát, 1940 / Transcarp (1, 96).
459. \***Tomentella pellicularioides** Wakef. / CWU (Myc) Kh-196 / LFS (Kharkiv oblast, Zmiev district, Haidary, Kharkiv University Biological Station, on fallen twigs of *Quercus* sp., coll. A.Yu. Akulov, A.S. Usichenko VII 2002).
460. **Tomentella subfuscata** (P. Karst.) Höhn. et Litsch., nom. dub. / Bondartsev, 1927 / LP (6, 174).
461. **Trechispora filia** (Bres.) Liberta — *Corticium filium* Bres. / Pilát, 1940 / Transcarp (1, 96).

**Akulov A.Yu., Usichenko A.S., Leontyev D.V., Yurchenko E.O., Prydiuk M.P.** Annotated checklist of aphyllophoroid fungi of Ukraine. — Mycena. — 2003. — Vol. 2, N 2. — P. 1–73. — UDC 582.287.23:001.4(477).

**SUMMARY:** The checklist of aphyllophoroid fungi (except of taxa with typical clavarioid and stipitate cantharelloid basidiomata) based on the data of literature since 1842 and examined collections from CWU, KW, LE, and MSK herbaria includes 461 species. Five species are belonged to doubtful records; 30 names are classified as dubious, confused, or of unclear application. The species are accompanied with the numbers of reference herbarium specimens, data on the earliest publishing for Ukraine, distribution in botanic- geographical districts (geobotanical regions) of Ukraine, and appropriate numbered literature references. Besides of up-to-date nomenclature, the synonyms used in the quoted publications and herbarium labels are listed. Six species are recorded from Ukraine for the first time on the base of collections gathered by the authors. The new species and new finds for the geobotanical region (districts) are provided by brief information about locality, substratum, collector(s), and date of collection. Taxa are arranged according to the system accepted in the 9<sup>th</sup> edition of "Ainsworth and Bisby's dictionary of the fungi". The checklist is supplemented by the floristic bibliography on aphyllophoroid fungi of Ukraine with titles in original languages and in English.

Key words: Aphyllophorales, biodiversity, history of investigation, distribution, nomenclature.
